AADT'S OF STATIONS FOR THE YEARS 2017 - 2023

This report reflects the Annual Average Daily Traffic (AADT) in Maryland for the last seven years (2017 through 2023). It contains the county, route, mile point, location ID, location description (description of the road segment for which the AADT applies) and the historic AADT for each station. The report is sorted by county, route, and mile point in ascending order.

Stations denoted by a "P" followed by a four-digit number, contain data collected from Automatic Traffic Recorders (ATR's). These ATR's collect length, volume and/or classification data, which is then downloaded, loaded into a database and validated on a daily basis. Stations denoted by a "T" followed by a four-digit number, contain data provided by Maryland Transportation Authority.

Stations denoted by a "B" or "S" followed by a multiple-digit number, contain data from Maryland's portable count program. The portable count program only collects volume and/or classification data, which is manually validated and loaded. The data for these stations is collected on a three- or six-year cycle depending on the roadway. Growth Factors are applied to counts which were not taken during the current year.

The AADT data contained in this report is estimated. The AADT estimates are derived by taking 48-hour machine count data and applying factors from permanent count stations.

A special numeric code was added to the AADT numbers, starting in 2006, to identify the years when the count was taken. The last digit represents the number of years prior to the actual count. Where "0" represents the current year when data was collected (in 2023), "1" represents the count taken in 2022, "2" represents the count taken in 2021, "3" represents the count taken in 2020 and so forth.
