

To All MDOT SHA Staff and Onsite Consultants:

As a result of observations made by the Office of Homeland Security & Occupational Safety (OHSOS) Team, the following is effective immediately across MDOT SHA:

1. No more than two people should occupy a MDOT SHA elevator at any site unless there is a clear emergency where elevator use is appropriate. When two people are on an elevator, they should position themselves to be as far as possible away from each other.
2. When entering buildings through single or double doors, only one person should pass through the doorway at the same time, a minimum of six (6) feet should be maintained between people in this case as well.
3. People should not pass between a screener and the person being screened at any site.
4. Whether wearing a mask or not, social distancing still applies to our workplace in the vast majority of daily activity.

Thanks, Darien
