COMMUNITY SUMMARY SHEET

Community Name: Andrews Manor
City/County: Prince George’s
Transportation Association: Automobile: Branch Avenue (MD 5), Auth Road, and Allentown Road

Chronological/Development Periods:
- A.D. 1680-1815
- A.D. 1815-1870
- A.D. 1870-1930
- A.D. 1930-Present
  specific dates (if known):

Residential Property Types:
- Unplanned Suburban Neighborhoods
- Planned Suburban Neighborhoods (developer planned / owner built)
- Planned Suburban Development (developer planned and built)

Non-residential Property Types:
- Commercial and Industrial Properties
- Community Buildings
- Recreation/Conservation Areas
- Not Applicable

Associated International/National Trends:
- early suburbs/Picturesque Movement
- Elite suburb planning
- Industrial town planning
- post-World War I
- WPA housing
- post-World War II

Associated Local/Regional Trends:
- retreat for wealthy
- expanding industry
- returning veterans
- expanding government (post-Civil War)
- expanding government (post-WW II)
- expansion of existing communities
- association with transportation mode

Narrative:

Andrews Manor is located south of the District of Columbia in Prince George’s County. It is bounded on the north by Capital Beltway (I-495), on the east by Allentown Road, on the south by Andrews Air Force Base, and on the west by Branch Avenue (MD 5). Development was attracted to this area in the 1940s and 1950s, due to the construction of Andrews Air Force Base in the early 1940s, and the proximity of the region to the District of Columbia. The installation of water and sewer lines into the area in the late 1950s and early 1960s promoted additional growth.

The subdivision of Andrews Manor was laid out in the early 1940s on the west side of Auth Road on land opposite Andrews Air Force Base. The streets were arranged in a grid pattern parallel with Auth Road. The community contained approximately eight houses in 1942 with an additional 70 houses by 1957. In the late 1950s and early 1960s, three cul-de-sacs were constructed on the east side of Auth Road around which additional houses were built. The houses built in Andrews Manor were Cape Cod, ranch, and split-level designs of wood-frame and brick.

The construction of the Henson Creek trunk sewer line in the early 1960s allowed for the construction of garden apartment complexes to the east of Branch Avenue (MD 5) adjacent to Andrews Air Force Base. On the east side of Auth Road, the Andrews Manor Apartments were constructed in the early 1960s. The complex contained 600 units on a grid pattern of streets.
Narrative (continued):

After the construction of the Andrews Manor Apartments, several retail facilities opened along Allentown Road to accommodate the new residents. The Andrews Manor Shopping Center, containing 20 stores, was opened in the early 1960s. This facility was followed by the construction of a department store, motel, and restaurant. Also resulting from the development were the establishment of the Princeton School and Auth Village Park, both located to the west of the original Andrews Manor development.

Associated Local/Regional Trends:
- retreat for wealthy
- expanding industry
- returning veterans
- expanding government (post-Civil War)
- expanding government (post-WW II)
- expansion of existing communities
- association with transportation mode

Narrative:

Avondale is located in Prince George’s County, adjacent to the northern boundary of the District of Columbia boundary. The settlement of Avondale began in the late 1930s as a small residential subdivision at the intersection of Eastern Avenue and Queens Chapel Road.

During the early 20th century, development in the Avondale area was concentrated in Hyattsville, Mount Rainier, and Brentwood along the Baltimore and Ohio Railroad and the streetcar line of the City and Suburban Railway. Land to the west of this core was largely undeveloped and rural in character. In the 1930s, development spread west from these communities, and subdivisions such as Queens Chapel Manor, Castle Manor, Avondale, and Green Meadows appeared. Developers of these subdivisions promoted the area’s convenient access into the city and its established utilities supply.

Construction of the Avondale Grove subdivision began in 1939. By 1942, the community contained approximately 100 structures located along eight streets on a wedge-shaped tract. At the southern tip of the subdivision is Carson Circle, the community’s entryway forming a quarter-circle between the boundary streets of Queens Chapel Road and LaSalle Road. The interior roads of the subdivision parallel the arch form of Carson Circle and radiate northward. The exterior blocks parallel the community’s boundary streets. Two additional arch-shaped streets were constructed to
Community Summary Sheet
Community Name: Avondale

Narrative (continued):

North of the original subdivision. These streets were planned but not complete by 1942. Along these streets are houses constructed in the 1940s and 1950s.

Three additional subdivisions in the Avondale area were constructed after World War II. Avondale Terrace is a single-family residential community adjacent to the north end of Avondale Grove. All of the structures in this subdivision were constructed in 1946. The next two communities were constructed in 1950. North Avondale is a community of brick double-houses located on the north side of Chillum Road, while Kirkwood is a garden-style apartment complex of 700 units on the west side of Queens Chapel Road. In the 1960s, the Avondale area along Queens Chapel Road was developed by a number of high-density apartment complexes and high-rises, such as Queens Park Plaza, Kings Park Plaza, and Versailles Plaza East. Two recreation areas established within the Avondale area include the Chillum Recreation Center and the Avondale Recreation Center. The Avondale Recreation Center was established from some of the land belonging to the former De La Salle College. The college was established between 1936 and 1942 and is currently used by St. Ann's High School and the Archdiocese of Washington. The community relies upon adjacent neighborhoods for schools and services such as police and fire protection.

Commercial activity is concentrated along the main thoroughfares of Queens Chapel Road, Chillum Road, and Ager Road. Located along the roads are shopping centers, banks, restaurants, and automobile-related properties. In the 1970s, the one industrial property was the storage area of a gas company.

Associated Local/Regional Trends:
- retreat for wealthy
- expanding industry
- returning veterans
- expanding government (post-Civil War)
- expanding government (post-WW II)
- expansion of existing communities
- association with transportation mode

Narrative:

Barnaby Manor is located south of the District of Columbia in Prince George’s County. The community is bounded on the north and east by Wheeler Road, on the south by Owens Road, and on the west by the Owens Road Neighborhood Park and Barnaby Village.

The community developed beginning in the 1940s at the intersection of St. Barnabas Road, Wheeler Road, and Owens Road. Both Wheeler Road and Owens Road provided access to the District of Columbia, while St. Barnabas Road connected Barnaby Manor with the Federal centers in Suitland. Barnaby Manor was an early land patent located along Barnaby Run in the District of Columbia and Prince George’s County. Many of the 20th-century subdivisions in the vicinity of this tract used the Barnaby name. By 1942, the Barnaby Manor subdivision contained two roads and few houses. Most of the residential construction occurred in Barnaby Manor and adjacent Barnaby Village the 1950s. These brick and frame ranch houses were constructed on large lots between 0.5 to one acre in size. In the late 1950s and early 1960s, these two subdivisions were joined by the communities of Eastover Knolls, Martin Park, and Weaver’s Knoll for an additional 145 houses. By 1965, the area contained Birchwood City Elementary School (now the Barnaby Manor Elementary School) and Potomac High School. Few commercial facilities were located in the immediate Barnaby Manor area; however, the Eastover Shopping Center was constructed nearby. Opened in
Narrative (Continued):

1955, the shopping center was one of the six largest shopping facilities in Prince George’s and Montgomery counties when it opened. Residential construction in this area continues to the present-day.

**Narrative:**

The neighborhood of Beltsville is located to the northeast of Washington, D.C. in Prince George's County. Beltsville was developed beginning in the 1830s when the B & O Railroad crossed the Belt family property and a small railroad station was established called Beltsville. The community developed at the intersection of the railroad and Baltimore Turnpike. The original area developed haphazardly and consisted of a few residences, two churches, several small stores, a blacksmith, and a wheelwright. In 1891, the Beltsville Land Improvement Company developed the South Beltsville subdivision as a grid of streets. The development company was chartered in 1891, and limited to an existence of 30 years. The company was founded by John Prescott, Frank Middleton, Charles E. Coffin, Cabb Magruder, Robert Vinton Hall, James Simms, and John Rayburn. The developers sold the lots to individual owners and placed restrictive covenants on the deeds. The company forbid that the properties be used for the manufacture or sale of alcohol, and prohibited the sale of any property to an African-American. The covenants also required approval by the company of any building plan and required the construction of cremation outhouses if sewers were not provided. This area was marketed to professionals who wanted to escape the congestion of Washington and was developed with a mixture of Victorian-era style houses and Colonial Revival houses. The Beltsville community grew further when an electric railway was extended to Beltsville. The railway began as the Berwyn and Laurel Railroad Company, but after suffering from financial difficulties, was acquired by the City and Suburban Electric Railroad Company. Located to the west...
Narrative (continued):

of the railroad, along the line of present-day Rhode Island Avenue, the streetcar line served as the nucleus for additional subdivisions. These areas continued to develop throughout the 1930s and 1940s with the construction of modest side-gable residences. Development continued after the introduction of the automobile. The state improved roads, and US Route 1 became the major north-south route along the east coast. Though Beltsville continued to develop, it was relatively far from Washington, and the more southern suburbs experienced greater growth. It was not until after the World War II that intensive development came to the Beltsville area. The increase in Federal employment and the dramatic rise in personal automobile use led to the suburbanization of Beltsville. The area west of Route 1 was developed as a residential area. Development increased in the 1960s as Interstate 95 made the area more accessible. Today, most of the farms are gone and Beltsville has become a densely populated suburb of the nation's capital (Neighborhoods 1974, 294-295).

Bibliography:

The municipality of Berwyn Heights is located to the northeast of Washington, D.C. and is surrounded by the communities of Greenbelt, College Park, and Riverdale in Prince George's County, Maryland. Berwyn Heights was developed beginning in 1888 along the B & O Railroad, and was originally known as Charlton Heights. The suburb was incorporated in 1896 under the name Berwyn Heights. Charlton Heights was created by Edward Graves, James E. Waugh, and David Lamb, and was immediately sold to the Charlton Heights Improvement Company. The suburb originally consisted of 383 acres with lots 50 feet by 100 feet abutting 50-foot streets laid out in an irregular pattern. The suburb attracted white-collar workers from Washington, D.C. About 20 homes were built in the first year, consisting of large, wood-frame Queen Anne and other Victorian-era styles. Four houses were built by the Charlton Heights Improvement Company from designs produced by the Cooperative Building Plan Association in New York City and distributed through the publications of R.W. Shoppell, president of the association. A railroad station was built through the support of local residents of both Berwyn and Charlton Heights, by 1896. That same year, the name was changed to Berwyn Heights when the town was incorporated. The Washington, Spa Spring, and Gretta Railway provided electric street car service to the town from 1905 to 1920, resulting in a slight increase in population. In 1915 the citizens organized themselves into the Berwyn Heights Association to promote town improvements. The streets and sidewalks were improved, and electricity was brought to the town in 1921. The town experienced a second wave of
growth after World War II (Denny 1997,45-49). Single-family home subdivisions were built in the large vacant areas in the eastern half of the old Charlton Heights subdivision. Constructed in the ranch, Cape Cod, and split-level styles, these homes represent about half of the development in Berwyn Heights (Neighborhoods 1974, 103).

**Narrative:**

The Berwyn neighborhood is located within the City of College Park, north of Washington, D.C. in Prince George's County. Berwyn was developed beginning circa 1885 adjacent to the B & O Railroad. The neighborhood was incorporated as part of College Park in 1945. Berwyn was created by Francis Shannabrook, a Pennsylvanian who purchased a tract of land between Baltimore Avenue and the B & O Railroad tracks. The suburb was originally called Central Heights, and Shannabrook established a small depot where Central Avenue crossed the railroad, built a general store, and erected approximately 15 homes in the area to attract moderate-income families looking to move out of Washington. The name was soon changed to Berwyn, and building lots arranged around an irregular grid of streets began to be marketed by the Berwyn Land and Improvement Company of Washington. The neighborhood began to grow after 1900 when the City and Suburban Electric Railway entered the area between Baltimore Avenue and the B & O Railroad tracks (now Rhode Island Avenue). Edward Daniel purchased the land to the north of the original Berwyn settlement and laid out a regular street grid with large lots. By 1925 there were approximately 100 single-family homes in the neighborhood. The original homes were mostly two-story, wood-frame buildings. The area supported a number of general stores, a weekly newspaper, a post office, and a church which provided library services. These businesses were mostly centered around the intersection of the street car line (now Rhode Island Avenue) with the main east-west road (Berwyn Road). The community continued to develop in the 1930s and 1940s, and many of the
undeveloped lots in Francis Shannabrook’s original subdivision of Central Heights were re-subdivided into smaller lots and improved with small one-story brick bungalows. Homes were built in the late 1930s for the increased number of workers employed in the Federal government during the New Deal Administration. The need for increased services for the expanding population, including improved roads, street lighting, storm drains, and fire protection, led to the incorporation of a number of communities, including Berwyn, as College Park in 1945 (Neighborhoods 1974, 100-102).

Narrative:

The town of Bladensburg is located north of the District of Columbia in Prince George’s County. The town is bounded on the north by Rogers Heights, on the east by the Baltimore-Washington Parkway (I-295), on the south by Landover Road and Newton Village, and on the west by Edmonston.

Bladensburg was founded in 1742 and operated as an important port facility in Colonial times. The tract of land that would become Bladensburg was acquired by Ninian Beall in 1696 and presented to his daughter upon her marriage to Charles Calvert. During the ownership of Elizabeth Calvert, the area gained the name of Garrison’s Landing for the Patuxent River port site. A Presbyterian church was constructed south of the port site in 1718 on land donated by Ninian Beall. This was followed by the construction of a tavern along the Baltimore Boulevard (present-day Alternate US Route 1). In 1742, the Maryland General Assembly passed an act for the establishment of a town near Garrison’s Landing and divided the town into 60 one-acre parcels. The settlement’s name was changed to Bladensburg after Thomas Bladen, the provincial Governor at that time. By 1776, all of the town’s lots had developed. A major attraction in Bladensburg from the 18th century through the 20th century was the Spa Springs. Thought to be a cure for various illnesses, the springs attracted visitors from throughout the region. A 20th-
century streetcar line was even named the Washington, Gretta, Spa Spring Railway. Another attraction was the Dueling Grounds, the site of many famous duels until after the Civil War.

By 1800 the Patuxent River had significantly filled with silt, making passage by large boats impossible. Within a few decades the port of Bladensburg was no longer able to function. However, the town remained an important crossroads of routes north to Baltimore and Philadelphia, south and east to the towns of Annapolis and Upper Marlboro, and west to the District of Columbia. The original terminus of the Baltimore and Ohio Railroad was Bladensburg, forcing all passengers intended for Washington to board carriages in Bladensburg to continue on into the city. A sharp decline of passengers was experienced in Bladensburg when an extension of the B&O was permitted into the District of Columbia in 1835.

Bladensburg remained a small town throughout the rest of the 19th century with modest development and infrastructure improvements. The town was incorporated in 1854. Schools and churches were constructed, including the first Freedmen’s Bureau school for African-Americans in 1866. The town experienced its most significant growth in the early 20th century with the construction of the first two residential sections of the town in 1914 and 1917. Named Decatur Heights, the subdivisions had gridded streets platted on the north and south sides of Annapolis Road. The town was enlarged again in 1947 by the Sunnybrook subdivision. The mid to late 20th century brought additional residential construction in the form of single-family houses and apartment complexes, as well as the construction of the Bladensburg Shopping Center. Several of the town’s buildings from the colonial and early Federal periods, including three 18th-century residences, one 18th-century commercial building, and an early 19th-century church remain.

Narrative:

Boulevard Heights is located in Prince George’s County, adjacent to the District of Columbia’s southeast boundary. The community is bounded on the north by the Bradbury Heights, on the east by Pennsylvania Avenue and the Cedar Hill Cemetery, on the south by the Stonegate Apartments, and on the west by the District of Columbia. Development began in Boulevard Heights in the 1910s, at the same time as adjacent Bradbury Heights, and soon after the establishment of nearby Hillside, Maryland Park, and Capitol Heights. Unlike the other communities, Boulevard Heights and Bradbury Heights did not have convenient access to public transportation. Instead, the developers promoted the subdivision’s proximity to the planned extension of Pennsylvania and Massachusetts Avenues. Bus service was not offered in the area until the route of the Washington, Marlboro and Annapolis Motor Line along the District Boundary began in the 1920s.

Boulevard Heights consists of three platted subdivisions: Boulevard Heights (1910s), Nonesuch Heights (1920s), and Dillon Park (1940). The first development occurred between 1914 and 1917 and consisted of approximately 15 houses on four streets. This development, platted as Boulevard Heights, followed the grid plan established by the other communities of this period adjacent to the District of Columbia. Nonesuch Heights continued the grid pattern of the Boulevard Heights. According to the 1930 census, Boulevard Heights was incorporated and had a population of 227. However, the corporation status lasted only briefly. In 1940, the developer-built development of
Narrative: (continued)

Dillon Park was constructed south of the previous subdivisions. The small community has curvilinear streets and modest houses constructed in 1940 and 1944. Construction continued throughout the post-World War II period in Boulevard Heights, resulting in a residential streetscape of various time periods. In the 1960s, several apartment communities were constructed along Southern Avenue. The Penn Southern Apartments, a 308-unit complex, and the South Hill Apartments, a mid-rise building, are located in Boulevard Heights.

Narrative:

The City of Bowie is located north of the District of Columbia in Prince George’s County. The town grew as a result of the construction of the Pope’s Creek branch and Washington branch lines of the Baltimore and Potomac Railroad. Though the first trains did not run until 1872, a subdivision called Huntington was platted in 1870 at the junction of the main rail line and spur line into Washington. Developed by Ben Plumb on 300 acres of Henry Carrick’s estate, the subdivision was laid out in a grid pattern of streets on lots 2500 square feet in size. The earliest construction activity focused along the rail line with the construction of businesses and residences, including worker housing for the railroad company. The railroad station constructed by the Baltimore and Potomac Railroad was named “Bowie,” in recognition of the influence Governor Oden Bowie had getting the line constructed. The community was officially named Huntington when incorporated in 1874, though the governing body was called the Commissioners of Bowie beginning in 1882. The name of the community was officially changed to Bowie in 1916.

Three miles to the east of the town of Bowie is the Belair Mansion constructed circa 1745. From its construction until the mid 20th century, Belair operated as a successful thoroughbred horse farm. In 1958, William Levitt purchased the sprawling Belair Estate with plans to establish a 2200-acre community such as the Levitt subdivisions in New York, New Jersey, and Pennsylvania. In 1959,
Narrative (continued):

Levitt succeeded in having his land annexed into the town of Bowie and construction of the Belair subdivision began in 1960. Also in 1960, the status of Bowie was changed to a city.

In 1968, a 2400-acre tract was annexed into the city for the planned community of Belair Village. The community consisted of nine villages, a commercial center, a large park, and lake. Approximately 7000 residences were constructed within the villages of Pointer Ridge, Amber Meadows, Northview, Evergreen Estates, Pin Oak Village, Glen Allen, and Covington. In 1988, a large retail and office complex was constructed at the southwest corner of the intersection of US Route 50 and US 301. Also in 1988, several housing developments, a foreign trade zone, and the Bowie New Town Center were planned. Bowie has numerous community facilities for its residents, including three community centers, three fire stations, several schools, seventy-six athletic fields, fifteen parks, and bike trails.

Narrative:
Bradbury Heights is located in Prince George’s County, adjacent to the District of Columbia’s southeast boundary. The community is bound on the north by the Hillside subdivision, on the east by Coral Hills, on the south by Boulevard Heights, and on the west by the District of Columbia. The community was platted by the German American Realty Company in 1909, concurrent with the nearby subdivisions of Capitol Heights and Hillside. Like these other developments, Bradbury Heights had a grid pattern of streets and offered small building lots of 20 feet wide and 100 feet deep. Though not located along any public transportation routes, the developers promoted the subdivision’s proximity to the planned extension of Pennsylvania and Massachusetts Avenues.

In the years before World War I, the community contained scattered residences on three streets extending southeast from Bowen Road in the District of Columbia. By 1936, the number of residences had increased slightly and a portion of Southern Avenue had been constructed through Bradbury Heights. The community fully developed during the housing boom of the post-World War II period. The housing stock of the pre-World War II period include simple wood-frame, two-story structures on various lot sizes. Most of the housing stock consists of post-World War II developer-built bungalows, Cape Cods, and ranchers on graded lots of between 5000 and 7500 square feet.
COMMUNITY SUMMARY SHEET
Community Name: Bradbury Heights

Narrative (Continued):

By 1970, approximately 30 percent of the residences were in some form of deterioration; however, code enforcement programs were underway.

Narrative:

The municipality of Brentwood is located just outside the northeast boundary of the District of Columbia in Prince George's County. It is surrounded by the communities of Mount Rainier, Cottage City, and North Brentwood. Brentwood was incorporated in 1922. The town was developed beginning in the 1890s around the Highland Station of the Washington Branch of the B&O Railroad and the Columbia & Maryland Electric Railway (which became the City & Suburban Electric Railway in 1898) which ran along Highland Avenue. Brentwood was created by Wallace A. Bartlett, a Civil War veteran, former foreman for the Government Printing Office, Patent Office examiner, and inventor originally from Warsaw, New York. Captain Bartlett lived in Washington, D.C. until 1887, when he purchased 206 acres of farmland from Benjamin Holliday, which abutted the Highland subdivision. Bartlett built a farmhouse for his family on the land and, with two partners J. Lee Adams and Samuel J. Mills, formed the Holladay Land and Improvement Company. In 1891, the Company platted a residential subdivision called "Holladay Company's Addition to Highland" on 80 acres of the Bartlett Farm. The lots were approximately 40 feet by 100 feet and were arranged around an irregular grid of streets. The lots in the northern part of the subdivision, which eventually would become North Brentwood, were smaller and were subject to flooding from a mill race. These lots were less expensive, and Bartlett encouraged their purchase by African-American families with whom he was indirectly associated from his command of U.S. Colored Troops in the Civil War. The more expensive lots to the south were purchased by white working-class families, many of whom
Narrative (Continued):

were employed as Federal government clerks. Seven additional houses were built by 1896. In 1899 Bartlett purchased the Fenwick family farm which was located to the west of the Holladay Company's Addition to Highland (Pearl 1992, 12-13). With two new partners, J. Baker and Dr. Sigmund A. Czarra, Bartlett began the Brentwood Company. The 95-acre area was surveyed and platted in 1899.

The streets were mostly gridded, but spaces were reserved for parkland at the eastern edge of the subdivision. There were several diagonal streets laid out adjacent to the parkland (Pearl 1992, 17). By 1904, there were 15 dwellings in the Holladay Addition, and 36 had been built in the Brentwood Company subdivision. These houses represented a typical cross-section of housing styles popular in the late-19th century, including I-houses, vernacular houses with Queen Anne detailing, Four-squares, and front-gable houses (Pearl 1992, 22).

The community continued to grow in the early 20th century. A school was built in 1903, a Methodist church was constructed in 1904, a fire department was started in 1905, and the Brentwood Citizens' Association was formed in 1903. A second group was formed in 1917. The Brentwood Improvement Association added kerosene street lamps in 1917; encouraged the use of electric lights, which were installed in 1920; and urged maintenance of the streets and a storm drainage system. The town, which was incorporated in 1922, included the southerly part of the Holladay Addition, the Brentwood Company subdivision, and two smaller additions (Denny 1997, 89-92). The houses built during this time consisted of small frame bungalows.

Growth continued through the 1940s and 1950s, fueled by an influx of government workers. In the 1950s, many older homes were replaced and empty lots were filled with small cottages and ranch houses (Pearl 1992, 58).

Narrative:

Broadview is located southeast of the District of Columbia in the Temple Hills area of Prince George's County. It is bounded on the north by Henderson Creek and Temple Hills Park, on the south and east by Henderson Road, and on the west by Temple Hill Road.

The first settlement in this area was a late-19th century grist mill at the intersection of Temple Road (now Temple Hill Road) and Henson Creek. The Temple Post Office was established at this location between 1878 and 1886. The area remained rural with few residences in 1917. By 1942, the name of Temple Road had been changed to Temple Hill Road, and the Temple Hills residential subdivision was under construction. To the southeast of this development, the subdivision of Broadview had been platted by 1942, though the construction of houses was delayed until the early 1950s. The subdivision was laid out in a grid pattern of streets with a small circle at the intersection of Keppler Road and Lucerne Road. The houses built were Cape Cod, ranch, and split-level designs of wood-frame and brick. Development was attracted to this area in the 1940s and 1950s due to the construction of Andrews Air Force Base in Camps Springs and the proximity of the region to the District of Columbia. The installation of water and sewer lines into the area in the late 1950s and early 1960s promoted additional growth.

Narrative:

The community of Camp Springs was settled in the mid-19th century at the crossroads of present-day Branch Avenue (MD 5) and Allentown Road. By 1860, the settlement contained several stores, a blacksmith shop, a school, Methodist Church, and several residences. Early maps record the name of this settlement Allentown, after the Allen family. The Allens were large landholders in the area, therefore, the town and adjacent road were named in recognition of them. The town’s popular name, and subsequently the name of its post office, was Camp Springs. According to local history, the community was called Camp Springs since soldiers en route to Fort Meade from the District of Columbia found the area to be a comfortable place to camp due to the abundant springs. The 1878 map labels the settlement as Allentown and the post office as Camp Springs. Throughout the late-19th and early 20th centuries, the Camp Springs area did not experience significant growth. However, the opening of Andrews Air Force Base on an adjacent tract of land, the proximity of the area to the District of Columbia, and a housing shortage after World War II made the Camp Springs area an ideal location for residential development.

Most of the development in the Camp Springs area occurred north of the Camp Springs crossroads in the 1940s and 1950s. The lack of water and sewer lines in most locations until the late 1950s and early 1960s kept the pace of development slow. The largest development in the 1940s was the subdivision of the Middleton farm north of Camp Springs. This farm was platted into...
Narrative (continued):

Glenn Hills, Middleton Farm, and Middleton Valley. Guy Trueman built one of his many subdivisions in the mid-1940s by platting Trueman Heights on over 100 acres in the northwest quadrant of the Camp Springs crossroads. Modest single-family houses were constructed along a fragmented grid of streets. Residential development during the 1950s primarily took the form of infill construction within subdivisions platted in the 1940s. One of the exceptions is the large Westchester Estates development located in the southwest quadrant of the Camp Springs crossroads. The over 400 houses were constructed along a curvilinear network of streets. Commercial development, consisting of shopping centers, restaurants, and hotels, extends along Allentown Road east of Branch Avenue. The largest boom of construction occurred in the 1960s and 1970s after the completion of water and sewer lines and the construction of the Capital Beltway. The 19th-century crossroads vanished during the 20th century with the reconstruction of Branch Avenue into a limited-access divided highway, and extensive commercial and residential development.

Narrative:

Capitol Heights is located in Prince George's County adjacent to the southeastern boundary of the District of Columbia. The town is bounded by the communities of Maryland Park, District Heights, and Hillside. Capitol Heights was platted by O.B. Zantzinger in 1904 on 400 acres overlooking the city. The small lots were 20 feet wide and 100 feet deep and offered to buyers for $20 to $150. The developer promoted no cash payments, no interest, and "no colored people." The $1.00/month payment plan compensated for the relative lack of public transportation. The Chesapeake Beach Railroad passed through the adjacent subdivision of Maryland Park and the Washington, Baltimore and Annapolis Electric Railway had a station in Seat Pleasant, almost one mile north of Capitol Heights. In 1909, Zantzinger subdivided another 400-acre tract, naming both tracts Greater Capitol Heights. This second tract would later gain the name of Hillside. By 1910, the community of approximately 200 houses had nearly impassable roads, no street lighting, and no water or sewer system. In an effort to improve public services, the community incorporated in 1910. Water lines finally reached the town in the 1930s. General development in Prince George's County during the early 20th century extended south from the Capitol Heights subdivision and included the developments of Coral Hills (1930s), Bradbury Heights (1909), and Boulevard Heights (1920s). A commercial strip developed along Old Central Avenue, while industries located near Walker Mill Road.

Bus transportation on the Washington, Marlboro and Annapolis Motor Lines facilitated growth in the 1920s, though most residential areas would not fully develop until the housing boom of the post World War II period.
Narrative: (continued)

One such residential community within the Capitol Heights area that benefited from this post war boom was the early 1900s subdivision of Spaulding Heights. Other communities planned after World War II included Fairfield, Kay Park and Highview.

The communities south of the original Capitol Heights–Hillside subdivision experienced the most growth during the post war period, achieving twice the population of the older subdivision. This rapid increase in population was due to the construction of many garden style apartment complexes and other multi-family housing units. The realignment of Central Avenue in the 1970s bypassed the Capitol Heights commercial district, though the construction of the METRO line at the north end of the community bought the potential for economic growth in the 1980s.

Bibliography:

The community of Carmody Hills is located in Prince George’s County, east of the District of Columbia boundary. Carmody Hills, platted in the 1930s, is one of several subdivisions constructed in the early to mid 20th century around the Town of Seat Pleasant. Suburban development in this area of Prince George’s County began in the late 19th century and continued to grow throughout the 20th century due to its proximity to Washington and access to the city via railroads, streetcar lines, and road networks. The early 20th-century communities were fostered by the Chesapeake Beach Railroad (1898) and the Washington, Baltimore and Annapolis Electric Railroad (1908). As the popular mode of transportation shifted from streetcar line to the automobile in the 1930s and 1940s, highways gave suburban residents access to the city. The George Palmer Highway (present-day Martin Luther King, Jr. Highway) was constructed on the right-of-way of the Washington, Baltimore and Annapolis Electric Railroad in the early 1940s. The Carmody Hills development benefited from its proximity to the streetcar line, highway, and existing community of Seat Pleasant.

Carmody Hills is located on the south side of Carmody Road and east of Seat Pleasant. The first development of the subdivision began in the early 1930s. House construction and road development continued from the 1930s through the 1970s. The 1927 USGS Map of Prince George’s County shows several streets extending a short distance south from Carmody Road with a few scattered houses. By 1942, the community was well established with approximately 130 houses on a grid pattern of nine north-south streets and three east-west streets. The subdivision had not grown in size by 1957, though vacant lots within
the established residential blocks were developed. Between 1957 and 1965, the community expanded one block to the south and several blocks to the east. Also constructed within that time period was the Carmody Hills School. An evaluation of housing conditions in Carmody Hills in the late 1960s found approximately one-third of the houses in need of enhancement. Code enforcement, as well as street paving and drainage, encouraged the construction of new houses in the 1970s in areas of the community previously inaccessible.

Narrative:

Castle Manor is located in Prince George’s County, north of the District of Columbia boundary in an area known as West Hyattsville. The community is located on the north side of Hamilton Street, east of Queens Chapel Road, between the subdivisions of Clearwood and Hyattsville Hills. The subdivision was incorporated into Hyattsville in 1945.

During the early 20th century, development in the Hyattsville area was focused along the Baltimore and Ohio Railroad and the streetcar line of the City and Suburban Railway. Land to the west of this core was largely undeveloped and rural in character. In the 1930s, development spread west from the early core of Hyattsville and subdivisions such as Queens Chapel Manor, Castle Manor, Avondale, and Green Meadows appeared. Developers of these subdivisions promoted the area’s convenient access into the city and its established utilities.

Construction of the Castle Manor subdivision began in the late 1930s. By 1942, the subdivision contained five streets and approximately 75 houses. The adjacent subdivision of Clearwood had three additional streets and approximately 40 houses. Present-day Jefferson Street connected both subdivisions. The street design of these two neighborhoods formed a grid pattern that was influenced by the alignment of pre-existing roads and by street patterns established in the older subdivisions of Hyattsville. The housing types constructed within Castle Manor and Clearwood were
COMMUNITY SUMMARY SHEET

Narrative:
Cheverly is located in Prince George’s County, north of the District of Columbia boundary. The community is bounded by Landover Road on the north, US Route 50 on the south and east, and the Baltimore-Washington Parkway on the west. Begun as planned suburb in the early 1900s, Cheverly was incorporated in 1931.

The first attempt at subdividing land in the Cheverly area was a 1904 plat for a 93-acre community called Cheverly Gardens. Unsuccessful, the land was purchased by Robert Marshall, president of the Washington Suburban Realty Company in 1918. Between 1918 and 1926, Marshall purchased parts of three other tracts of land adjacent to Cheverly Gardens known as Mount Hope, Hudson's Range, and Whitlentine. The Cheverly subdivision platted by Marshall was developed around the 1839 Magruder family homestead known as Mount Hope. Marshall became the first resident of Cheverly by taking up residence in the restored homestead in 1919. In 1923, the first road was completed and paved to connect the Pennsylvania Railroad line to Landover Road. First named LeBlond Avenue after the development company’s principal investor, the name was later changed to Cheverly Avenue.

The subdivision planners laid out curvilinear streets to fit the topography of the land and retain the mature vegetation. Lots were 0.25 acre in size, upon which houses of moderate cost were constructed by the developer. Thirty-four developer-built houses were constructed between 1921 and 1925. Most of the early houses were mail-order designs from Sears & Roebuck and the McClure Homes Company.
Since Marshall was a part-owner of the adjacent Beaverdam Country Club, he envisioned a grand boulevard connecting the community with the golf course along the route of present-day Forest Avenue. However, financial difficulties stopped work on the project with only gutter and street light work completed by 1926. Marshall lost control of the Washington Suburban Realty Company in 1927. Henry Wardman assumed the position until the company's bankruptcy in 1929 due to the stock market crash.

Creditors forced the sale of building lots at auction, resulting in a loss of prestige for the community as well as a loss of property value. Concerns for better roads and services prompted the residents of Cheverly to petition for incorporation, which was granted in 1931. During the 1930s and 1940s, the streets were improved and lighting enhanced. During this period, the number of residences increased from 135 to 650. Residential construction continued through the 1960s, creating a varied housing stock of early Cape Cod houses, with later ranch, and split-level types. Two garden-style apartment complexes (Cheverly Terrace and Hanson Arms) were constructed in the early 1960s along Landover Road near the US Route 50 interchange. These complexes consist of brick multi-family units fronting Landover Road.

Other community features include parks, a school, municipal building, and industrial facilities. The American Legion Park established in the center of town in 1935 was the first park in Cheverly. Other parks were created in the 1950s and 1970s. The first school was opened in 1955 and replaced in 1991. The community center, town hall, and park facility was built in 1978. Industrial property was established in 1958 on the west side of town and adjacent to US Route 50.

**Narrative:**

Chillum is located in Prince George's County, north of the District of Columbia boundary. The original community of Chillum began as a small crossroads settlement and evolved into a large suburban community during the 20th century. Today, the name Chillum applies to a region of neighborhoods located between the East-West Highway on the north, the Northwest Branch of the Anacostia River on the east, the District of Columbia boundary on the south, and Riggs Road on the west. Included in the area are the single-family residential subdivisions of Chillum Gardens, Chillumgate, Oakdale Terrace, Green Meadows, Brookside Meadows, Bel Air Estates, Miller Estates, Carrington, Sargent Knolls, and Michigan Park Hills. Apartment complexes in this area include Chillum Heights Apartments, Ager Terrace Apartments, King's Park Plaza, Queen's Park Plaza.

The first section of Chillum Road, between Riggs Road and Sargent Road, was established between 1861 and 1878. A few scattered residences developed at the intersection of Riggs Road and Chillum Road by 1878. In the early 20th century, the surrounding area was largely agricultural, consisting of small truck farms. Since this area was not serviced by public transportation, such as a streetcar, Chillum remained rural in character into the 1930s. Beginning in the mid 1930s, the area of Chillum that is close to the District of Columbia border was subdivided into lots. Developers promoted the area's convenient access into the city as well as its water, gas, and electricity supply.

KCI Technologies, Inc.  
October 1999
The first platted developments in the late 1930s included Chillum Gardens and Oakdale Terrace. The developers of these communities sold the lots but left the construction of houses to the lot owners. Consequently, the communities were slow to develop. In contrast, the developer-built Green Meadows and Brookdale Manor were platted in the early 1940s and completed by 1942. Other developer-built communities begun in the 1940s include Chillumgate (1946) and Michigan Hills Park (1940s). Several subdivisions were constructed along Riggs Road, Sargent Road, and Sligo Creek Park in the 1950s, including Sargent Knolls (1950), Bel Air Estates (1955), Parkland (1955), Carrington (1957), and Miller Estates (mid-1950s-early 1960s). The street pattern of these communities are typical of their period. They have a grid pattern of streets broken by a few curvilinear roadways, and cul-de-sac. In addition to single-family residences, two apartment communities were constructed in 1949. The Chillum Heights Apartments and Ager Terrace Apartments consist of three-story brick structures containing a combined total of 1147 units. Larger-scale apartment complexes and mid-rise structures were constructed in the 1960s.

Community facilities include schools, parks, and a fire station. Schools within the Chillum community include Chillum Elementary, Rollingcrest Junior High School, and Parkway School. The Parkway School has since closed. Parkland is reserved for public use in the Chillum Park, Green Meadows Park, and Rollingcrest-Chillum Community Center and Splash Park facilities. The Prince George’s County Fire Station No. 44 was constructed on the west side of Riggs Road after 1979.

Commercial activity in the Chillum area is concentrated in shopping centers located at the intersections of the principal roadways. Two of the shopping centers, Riggs Plaza Shopping Center (1960s) and the Riggs-Sargent Shopping Center (1970s), contain supermarkets, drug stores and other retail outlets. Other establishments such as gas stations and restaurants are scattered throughout the community.

The municipality of College Park is located to the north of Washington, D.C. in Prince George's County. It is surrounded by the communities of Berwyn Heights, University Park, the University of Maryland, and the Beltsville Agricultural Research Center. College Park was developed beginning in 1889 near the Maryland Agricultural College (later the University of Maryland) and the College Station stop of the B & O Railroad. The suburb was incorporated in 1945 and included the subdivisions of College Park, Lakeland, Berwyn, Oak Spring, Branchville, Daniel's Park, and Hollywood (Neighborhoods 1974, 88). The original College Park subdivision was first platted in 1872 by Eugene Campbell. The area remained undeveloped and was re-platted in 1889 by John O. Johnson and Samuel Curriden, Washington real estate developers. The original 125-acre tract was divided into a grid-street pattern with long, narrow building lots. The community's grid was based on a standard block 400 feet square divided into 16 building lots. The standard lot size was 50 feet by 200 feet. The streets were named after prominent Eastern colleges and universities, except the southern boundary street which was named for the Calverts, the original owners of the land. Johnson also constructed homes and a small store (Denny 1997, 117). College Park developed rapidly, catering to those who were seeking to escape the crowded City of Washington, as well as to a rapidly expanding staff of college faculty and employees. College Park originally included single-family residences constructed in the Shingle, Queen Anne, and Stick styles, as well as modest vernacular dwellings. A school was constructed at the corner of Princeton Avenue and Hartwick Road in 1900. There were very few non-residential buildings built before the 20th century. Development slowly expanded to the west and north along College Avenue. A few original blocks were re-subdivided into a more dense pattern of smaller blocks. Commercial development increased in the 1920s, aided by the increased automobile traffic and the growing campus.
Narrative (continued):

Baltimore Avenue consisted of one- or two-story commercial blocks with large display windows, some with elaborate detailing (M-NCPPC 1997, 10). Housing styles had shifted to simpler Colonial Revival and Bungalow forms during the 1920s. By the late 1930s, most of the original subdivision had been partially developed. Several fraternities and sororities from the University of Maryland built houses in the neighborhood. After World War II, construction consisted mostly of infill of ranch and split-level houses. After incorporation in 1945, the city continued to grow and build a municipal center in 1959 (M-NCPPC 1997, 12-13).

Narrative:

The municipality of Colmar Manor is located adjacent to Washington, D.C., east of the city in Prince George’s County. It is surrounded by Cottage City, Edmonston, and Anacostia River Park. Colmar Manor was incorporated in 1927. The name was derived from the town’s proximity to Washington, D.C. The “Col” being derived from Columbia and the “Mar” from Maryland.

In 1912, the Capitol Cemetery of Prince George’s County was incorporated on the Washington, D.C. boundary line. Directly north of the cemetery was the Shreve estate. The Shreve house was destroyed in the 1890s. The Bladensburg Road transversed the area, becoming more heavily travel in the 1920s, and eventually became designated as US Route 1. Part of the former Shreve estate was subdivided into building lots in 1918. The lots were 50 feet wide by 100 feet deep, arranged along a grid pattern of streets. The location of the development within the first service area of the Washington Suburban Sanitary Commission offered homeowners modern water and sewer lines. The houses constructed were modest one- and two-story wood-frame buildings. In 1931, the town’s streets were paved and gutters installed. A concrete block municipal building was constructed in 1934, followed by the construction of a brick schoolhouse in 1935.

In 1959, a new municipal building was constructed to house the town’s administrative offices and police department. During the second half of the 20th century the area along Bladensburg Road became lined with commercial establishments and much of the housing stock was used as rental units. A large urban renewal
project in the 1970s and 1980s resulted in the demolition of many commercial properties along Bladenburg Road. The old businesses were replaced with new structures such as fast food restaurants and a shopping center. Streets and houses were also improved. The Colmar Manor Community Park was established along the west bank of the Anacostia River in the 1970s on the site of a sanitary landfill.

Narrative:

Columbia Park is located in Prince George’s County, northeast of the District of Columbia. The community is bounded by the north by Capital Hills East and Kent Village, on the east by Martin Luther King, Jr. Highway, on the south by White House Heights, and on the west by the Kentland Community Center Park. The community was platted in the early 1900s, though substantial development did not occur until after World War II. The 1914 USGS Quadrangle Map of Washington and Vicinity shows no streets or houses located in the Columbia Park area. By 1917, seven streets and approximately 25 houses appear. The grid-pattern of streets include present-day Columbia Avenue, Virginia Avenue, Oregon Avenue, Kent Village Drive, El Paso Street, Duluth Street, and Camden Street. The housing stock from this period includes bungalows and modest two-story, wood-frame buildings. The community did not expand in size until the period between 1936 and 1942. A golf course known as the Beaverdam Country Club was developed on the west side of Columbia Park and four additional streets were laid out. Containing approximately 25 additional houses, the new streets include present-day Ridge Drive, Marlboro Avenue, Spring Street East, and Spring Place East. By 1957, Kentland Park was established on the north side of the community and the Beaverdam Country Club was renamed the Prince George’s Country Club. Also by 1957, the east side of the Columbia Park subdivision had expanded to include three new streets (Chesapeake Street, Flagstaff Street, and Forest Road) and the Columbia Park Elementary School was constructed on the south side of Columbia Park Road. The housing stock of this period include developer-built split-level houses from the post-World War II period.

KCI Technologies, Inc.
October 1999
By 1965, the community reached its present configuration of streets, with several residential blocks laid out on the south side of Columbia Park Road and west of the elementary school. In the 1960s, three apartment complexes were constructed in the Columbia Park area. These include the Columbia Arms, Country Club Gardens, and Columbia Park. Commercial activity is limited to shopping centers in nearby communities, such as the Kent Village Shopping center, or the Landover Mall, which was completed in 1972. Several other retail businesses are scattered along the Martin Luther King, Jr. Highway. After 1979, the Prince George’s Country Club became the Kentland Community Center Park, while another community park was established on the east side of the Columbia Park Elementary School.

Narrative:

The municipality of Cottage City is located to the west of the Anacostia River, adjacent to Washington, D.C. in Prince George’s County. It is surrounded by Brentwood, Colmar Manor, and the Anacostia River. Cottage City was developed beginning in 1870 under the name of “The Highlands.” The area was incorporated in 1924 as Cottage City. A group of developers began to promote a residential community with large lots and a grid pattern of streets, stating the advantages of the community. The Highlands would feature cottages and villas on wide avenues, a good view, nominal taxes, and was close to Washington, D.C., the historic Bladensburg battlefield, spa spring, and dueling ground. The development failed despite the advertising campaign. In 1886, Colonel Gilbert Moyer bought the Highland tract, and incorporated the Highland Company in 1888. The land was re-subdivided into smaller lots, and Moyer promoted the land by including information that a streetcar line was soon to be developed in the area. This attempt to develop the area also failed. A few houses were developed on the Moyer property beginning in 1904 with broad streets laid out in a grid and trees planted along the street. A single-track trolley line ran through the community from Washington to Bladensburg. Called the Washington, Spa Spring, and Gretta Railroad Company, the trolley was eventually discontinued in 1923, partially due to competition from the B & O Railroad and the streetcar line in Mt. Rainier (Denny 1997, 138-139). In 1915, Charles Lightbrown borrowed money and attempted to market the subdivision plat from 1888 with a few minor changes. This attempt succeeded where the two earlier attempts had failed. Lightbrown built most of the housing in the community. Consisting of one-story cottages with four rooms and no running water, the housing was attractive to veterans returning from World War I who needed economical homes which were ready to inhabit (Denny 1997, 140). Electric service was introduced to the...

**Narrative:**

The neighborhood of Daniels Park is located within the municipality of College Park, north of Washington, D.C., in Prince George's County. The neighborhood is bounded on the north by Hollywood, on the east by the B&O Railroad line, on the south by Branchville, and on the west by Baltimore Avenue (US Route 1). Hollywood and Branchville, like Daniels Park, are neighborhoods within the incorporated College Park.

Daniels Park was developed beginning in 1905 on the east and west sides of the City and Suburban Electric Railway in north College Park. Daniels Park was created by Edward Daniels on 47 acres of land. This small residential subdivision was improved with single-family houses arranged along a grid pattern of streets. The houses range in style from Four Squares to bungalows, and were built between 1905 and the 1930s. The neighborhood was incorporated as part of the City of College Park in 1945 (Denny 1997, 119-120).

Narrative:

The neighborhood of Decatur Heights is located in Prince George’s County, north of the northeast quadrant of the District of Columbia. Decatur Heights refers to two residential subdivisions platted within the corporate limits of Bladensburg in 1914 and 1917. The subdivisions are adjacent to the Washington, Spa Spring and Gretta Railway constructed through Bladensburg between 1908 and 1910. According to historic maps, the first reference to Decatur Heights appears on the USGS Quadrangle Map District of Columbia, 1917, in reference to two north-south streets between Annapolis Road and present-day Quincy Street (52nd Street and 53rd Street). Thirteen houses appear along these streets on the 1917 map. By 1942, this area contained approximately 21 houses and a school (now the Bladensburg Elementary School). Also by 1942, the area north of Annapolis Road had been developed with a school (now the Bladensburg Instructional Services Center) and a grid pattern of streets containing two north-south streets and three east-west streets. It is likely that this subdivision north of Annapolis Road was the one platted in 1917 and therefore, slower to develop than the earlier subdivision south of Annapolis Road.

The residential subdivision on the north side of Annapolis Road was more than half developed by 1942 and would continue to expand to the east during the next two decades. Decatur Heights is labeled on the north side of Annapolis Road on the 1957 USGS Washington East Quadrangle map. The community had grown to the east of the original subdivision by extending a few of the existing east-west roads and adding curvilinear north-south streets. By 1965, the community had expanded to its current size.

**Narrative:**

District Heights is located east of the District of Columbia in Prince George’s County. The community is bounded on the north by several subdivisions along Walker Mill Road, on the east by Ritchie Road, on the south by the Carlson Spring subdivision and Marlboro Pike, and on the west by County Road.

Major Leander P. Williams assembled four tracts of land totally 504 acres between 1874 and 1875 and established a farm. The land was located along the Washington and Marlboro Turnpike constructed beginning in 1869. In the early 1920s, two oil wells were drilled on the land during what was locally called the “great oil strike,” although it is not known how much oil was produced from the wells. In 1925, the Williams farm was sold to the District Heights Company. The development company thoughtfully planned their subdivision and provided amenities lacking in the other subdivision of its time. Between 1925 and 1926, the company laid out the streets, with curbing, gutters, sidewalks, sewers, water lines, and fire plugs. Even the first three blocks were paved with gravel. By 1926, the developer had constructed approximately 25 houses, consisting of five-room bungalows and six-room, two-story houses. In later years, the developer constructed Sear-Robuck houses but allowed lot owners to construct their own houses, if desired. Retail facilities in these early years included a gas station and grocery store, both constructed in 1926.

Public transportation into the District of Columbia was not available, so the developers provided a shuttle into the city two times daily. This service continued until the bus line of the Washington, Marlboro and Annapolis Motor Line reached District Heights in 1947.
District Heights was incorporated in 1936 in an effort to improve the quality of its streets through gasoline taxes. Also in 1936, the District Heights school was constructed, later expanded in 1961 and supplemented by the District Heights Parkway School in 1954. The fire department, organized in 1942, built its first permanent fire station in 1954. The first municipal center was constructed in 1961 and replaced in 1981.

The District Heights Company reorganized as the Thrifty Homes, Inc. in 1938 with residential construction continuing at a slow pace. In 1956, the remaining 300 undeveloped acres in District Heights was purchased by Washington Estates, Inc. One of the company’s projects included the construction of the 900-unit District Heights Apartments (now Hilltop Apartments) in the early 1950s. Construction in District Heights, designated a “City” in 1962, continued throughout the 20th century.

Narrative:

The town of Edmonston is located northeast of the District of Columbia in Prince George’s County. It is bounded on the north by Riverdale, on the south and east by Bladensburg, and on the west by Hyattsville. The Northwest Branch of the Anacostia River separates the east and west halves of the town.

Two subdivisions that would later comprise the town of Edmonston were platted in 1903. The eastern section of Edmonston was developed by J. Harris Rogers on two parcels of land he purchased in the 1880s and 1890s. In 1903, Rogers platted 70 acres into a subdivision of more than 170 lots known as East Hyattsville. The average lot in the southern section of the subdivision measured 50 feet by 200 feet, while lots in the north section were irregularly shaped and contained between one to three acres each. Prior to the subdivision several lots had already been sold, resulting in the construction of two large houses and six front-gable vernacular residences.

The west half of the town of Edmonston began with the subdivision of Dr. Charles A. Wells. Wells purchased the 90-acre Palestine Farm from Benjamin Franklin Guy in 1878 and 1879 and continued the farm’s dairy operations until 1903. Twenty-five of the farm’s acres were subdivided into 62 building lots of various sizes. Most of the lots were sold unimproved, however, Wells did
construct five residences on speculation. Within the first decade 55 houses were constructed in both subdivisions. Today over 31 of those structures remain. The earliest buildings were simple vernacular buildings such as the I-house that were later adapted to the constraints of the narrow suburban building lot. The result was a proliferation of front-gable houses constructed during the early twentieth century.

A pumping station was constructed in the Palestine subdivision in the late 19th century and supplied water to the City of Hyattsville. This facility operated until operations were taken over by the Washington Suburban Sanitary Commission in 1920. Also in the Palestine subdivision was the first school to serve the future town of Edmonston. Constructed in 1915, the building has undergone several phases of additions and alterations and currently functions as the National Technical Institute.

After World War I, the residents of East Hyattsville and Palestine began a movement toward incorporation to improve services. Compared to the established Hyattsville, incorporated in 1886, East Hyattsville contained more working class residents, more modest houses, and more immigrants. Instead of choosing the name of East Hyattsville when incorporating in 1924, the residents decided to choose a name that would give the town an independent identity. The name of Edmonston, a major north-south road adjacent to the town was chosen.

The Funkhouser subdivision was platted in 1925 on an undeveloped part of the original Palestine subdivision. The land was divided into 40 lots upon which Robert Funkhouser constructed a small bungalow. The houses were completed in 1926 and quickly sold. Throughout the 1930s and 1940s development consisted of sporatic house construction on vacant lots within the established subdivisions. After World War II, the Edmonston Terrace subdivision was constructed. Signaling a departure from the random development of the previous decades, Edmonston Village consisted of an organized development of 41 nearly identical two-story brick side-gable houses. Residential construction during the 1950s and 1960s returned to sporatic infill. One exception was the construction of the Fountain Park Apartment complex in the 1960s. The town is “land-locked” by adjacent communities prohibiting continued growth. In fact, the town lost population steadily from 1970 to 1990.

Narrative:

Fairmount Heights is located in Prince George’s County, adjacent to the extreme east corner of the District of Columbia. Established in 1900, Fairmount Heights is one of the earliest planned communities for African-Americans in the Washington, D.C. area. The community consists of six planned subdivisions platted between 1900 and 1923.

Robinson White and Allen Clark, white businessmen from the District of Columbia, platted the first subdivision in 1900 on 50 acres of farmland formerly owned by the Wilson, Godfrey, Belt, and Lee families. The subdivision called Fairmount Heights consisted of a grid-pattern of streets that extended to the northeast, away from the District boundary. The average lot size was 25 feet wide by 125 feet deep and was priced to encourage their purchase by African-Americans from the city.

In 1907, a second subdivision was platted by J.D. O’Meara on 12 acres called Waterford. This subdivision on the east side of Fairmount Heights was slow to develop. John C. Wiessner had the third subdivision in the area platted in 1909. Named Mount Wiessner, the subdivision was laid out on 56 acres and had larger lots than the rest of Fairmount Heights. Only one acre from this subdivision was included in Fairmount Heights when the town was incorporated in 1935.

Community Name: Fairmount Heights

Narrative: (continued)

Elizabeth Haines added eight blocks to the Fairmount Heights subdivision in 1910 when the North Fairmount Heights subdivision was platted. This development was followed in 1911 by the Silence family subdivision, West Fairmount Heights. The heirs of the Silence family subdivided their 36-acre farm around their farmhouse.

The developers of the Fairmount Heights subdivisions laid out the streets and sold the lots, leaving the construction of houses to the lot owners. One exception was the construction of 19 small bungalows in 1920 by Robinson White, one of the original developers of the first Fairmount Heights subdivision. These bungalows were sold between 1920 and 1929.

The last subdivision in Fairmount Heights was begun in 1922. The Weeks Realty Company platted Sylvan Vista on the Hoover family farm. The subdivision differed from the rest of Fairmount Heights by arranging lots along streets radiating out from a central “market” circle. The developers also reserved parkland along a ravine in the middle of the community. The houses constructed in Sylvan Heights were smaller than the residences in the rest of the neighborhood.

When Fairmount Heights was incorporated in 1935, its corporate boundaries included the subdivisions of Fairmount Heights, North Fairmount Heights, West Fairmount Heights, Waterford, Sylvan Heights, and a part of Mount Wiessner. Though curbs were installed in 1944, more than two-thirds of the town’s roads remained unimproved for many years. This problem was not remedied until street and sidewalk paving began in 1967.

Throughout its history, Fairmount Heights has contained many community associations and community buildings. The Fairmount Heights Mutual Improvement Company constructed a social hall on Chapel Avenue (now 61st Street) in 1908 to serve community functions. The building also housed the community school and Methodist church until separate facilities were constructed. After many years, the building was converted to residential use. The first school was constructed in 1912 and was replaced in 1934. A fire company was formed and a station built in 1917. A municipal center constructed in 1942 provided new facilities for the fire and police departments, as well as administrative office space. In 1980 a new multi-purpose structure was constructed for meeting space, administrative offices and the police department.

Narrative:

Forest Heights is located south of the District of Columbia in Prince George’s County. In 1940, the Washington Heights Reality Company platted a subdivision known as Forest Heights along both sides of Livingston Road. The plat for the town contained several hundred lots with a lot size of 7000 square feet and a provision for a commercial center along Livingston Road. The first houses were constructed in 1941, though the start of World War II postponed construction. During the war, the Federal government constructed the Indian Head Highway (MD 210) through Forest Heights on the right-of-way of Livingston Avenue. This highway and the construction of the South Capitol Street Bridge provided easy access into the city and created a building boom in Forest Heights. Forest Heights was incorporated in 1949 and work began on paving streets, collecting trash, and providing for public safety. A police force was created in 1952 and a town hall/community center was constructed in 1954. The Eastover Shopping Center was constructed on the north end of Forest Heights, west of Indian Head Highway. Opened in 1955, the shopping center was one of the six largest shopping facilities in Prince George’s and Montgomery Counties when it opened. The Flintstone and Forest Heights Schools had been constructed by 1965. The Clifford Armhold Park, named after a mayor who held his post for 22 years, was opened in 1974.

Narrative:

Forestville is located southeast of the District of Columbia in Prince George’s County. The core of the community is bounded on the north by the Forestville Center industrial park, on the east by the Capital Beltway (I-495), on the south by Pennsylvania Avenue (MD 4), and on the west by Forestville Road.

The land that became the community of Forestville was called Long Old Fields in the 19th century. Since ‘old field’ was a term used to refer to land depleted from tobacco cultivation, the name perhaps indicates the land’s former use. A small crossroads settlement developed at the intersection of Marlboro Pike and present-day Forestville Road by the Civil War. The settlement contained a small hotel, blacksmith shop, post office, stores, churches, and residences. By 1878, the name of the community officially changed to Forestville.

Though the community of Forestville would change significantly during the 20th century, the first few decades left the crossroads settlement relatively unchanged. Most of the suburban development in Prince George’s County during the early 20th century centered along the few streetcar lines and railroads in the county or areas serviced by water and sewer lines. The Forestville area was not serviced by public transportation into the District of Columbia or public sewer lines. Developers were not able to access sewer lines in Forestville until the late 1940s. Despite the lack of services, the Sansbury farm in the southeast quadrant of the crossroads intersection was subdivided into Sanbury Park. Small lots (3000 square feet in size) were platted along a grid pattern of narrow streets and offered for sale in 1925. Development of houses began in the late 1920s and continued sporadically through the 1960s. In the 1930s, the subdivision of Ole Longfields was platted adjacent to Sansbury Park. Like its neighboring...
subdivision, Ole Longfields was laid out with a grid pattern of streets and offered lots for sale. A third subdivision was begun on the north side of Marlboro Pike, just east of the crossroads, in the 1940s. The small Forest Edge subdivision consists of two streets and residences constructed from the late 1940s to the early 1960s. Sporadic residential development occurred along both sides of Marlboro Pike, east of Forestville Road, during the first half of the 20th century. The resulting development, dating from the 1930s to the 1960s, is a mix of modest wood-frame cottages and one Sears mail-order house.

The crossroads settlement itself underwent changes during the 20th century. The most dramatic change was the bypass of Marlboro Pike by Pennsylvania Avenue (MD 4) and the construction of the Capital Beltway (I-495). An interchange between the Beltway and Pennsylvania Avenue is located on a portion of Marlboro Pike and the end of the old Forestville settlement. Pennsylvania Avenue bisects the community of Ole Longfields. The crossroads no longer contains the buildings identified on historic maps. Instead, the intersection is dominated by warehouse-style retail facilities and the Forestville Plaza shopping center. A large parcel north of Forestville is now the site of the Forestville Center industrial park.

**Narrative:**

Glenarden is located east of the District of Columbia in Prince George’s County. The community is bounded on the north by Armore and Springdale communities, on the east by undeveloped land, on the south by Landover Road and Landover Mall, and on the west by industrial parks and undeveloped land.

The construction of the Washington, Baltimore and Annapolis Electric Railroad through rural Prince George’s County prompted a wave of growth along the length of its line. In particular, two African American communities, Lincoln and Fairmount Heights, had been successfully established along the streetcar line by 1910.

In 1910, William R. Smith, a Washington D.C. developer operating as the Glenarden Development Company, purchased approximately 155 acres of land on both sides of the Washington, Baltimore and Annapolis Electric Railroad. The streets on the east side of the streetcar line were platted in a grid pattern extending away from the line. The Glenarden station was constructed at the intersection of the streetcar line and the main through street of the community. The station was surrounded by landscaping and a circular road. The community was marketed to African-American, many of whom worked for the Pennsylvania Railroad and streetcar line.
COMMUNITY SUMMARY SHEET
Community Name: Glenarden

Narrative (continued):

In 1921, land on the west side of the streetcar line was platted as Ardwick Park. The first development in Glenarden was scattered and growth was slow, similar to the development experienced in Lincoln. The community lacked utilities, including electricity, and police protection during the early years. By 1920, the community contained 25 houses and one church. In 1922, the county constructed a two-room schoolhouse in the Ardwick Park section that served the community until 1950. By the end of the 1930s, 55 houses had been constructed in the Glenarden area, including 25 houses in Glenarden, 20 houses in Glenarden Heights, and 6 houses in Ardmore Park.

In the 1920s and 1930s, the African-American communities of North Brentwood and Fairmount Heights incorporated. Following the example of those communities in pursuit of better public services, Glenarden incorporated in 1939. Incorporation brought electricity and the beginning of street paving. The year 1939 also marked the beginning of police protection and the organization of a fire department. The fire department later disbanded and now relies on the Kentland Volunteer Fire Department to provide the service. The first town hall was constructed in 1943 and used until replaced by new facility in 1965. An addition to the town hall was constructed in 1977-1978 so that all town departments could be housed in one building.

Public services continued to improve in the 1940s and 1950s. The Washington Suburban Sanitary Commission installed water and sewer lines and the Washington, Marlboro, and Annapolis bus company began service between Glenarden and Seat Pleasant in 1945. From Seat Pleasant, the rider could transfer to train and streetcar lines for transportation into the District of Columbia. Mail service to the town became available for the first time in 1950 after the construction of a post office. However, home delivery was still not available. The first recreation center opened in 1954, with another center opened in 1971-1972.

The population of the community increased rapidly in the late 1950s and 1960s through the annexation of Glenarden Woods, the Tyrol tract, and the Cord Tract. In 1963, in cooperation with the U.S. Public Housing Administration, the Glenarden Housing Authority constructed a 90-unit public housing project. The Glenarden Building Corporation constructed 100 middle-income houses along Glenarden Parkway in 1977. Beginning in 1965 and continuing through the 1970s, an urban renewal program was designed to eliminate and/or rehabilitate standard older housing, provide suitable building sites for new construction, and improve streets and sidewalks. Much of the older housing stock was replaced by public housing during this period.

Retail facilities were brought to the town in 1981 with the construction of the Washington Commerce Center. The shopping center was annexed into the town in 1983, along with the Carrollton Station subdivision containing 200 townhouses. Another annexation in 1985 increased the town’s land holdings by 245 acres, almost doubling the size of the community.

- expanding industry
- returning veterans
- expanding government (post-Civil War)
- expanding government (post-WW II)
- expansion of existing communities
- association with transportation mode

Narrative:

Glenn Dale is located northeast of the District of Columbia in Prince George’s County. Platted along the Washington Branch of the Baltimore and Potomac Railroad in the 1870s, the community is presently bounded on the north by the Goddard Corporate Park, on the east by Glenn Dale Boulevard, on the south by Glenn Dale Heights, and on the west by Folly Branch Steam Valley Park.

Originally platted as Glennville in 1871 by Baltimore attorney John Glenn and Edmund B. Duvall, the subdivision name was changed to Glenndale in 1886. The spelling “Glenn Dale” was applied later. By the late 1870s, the community contained an Episcopal Church, a school, a railroad station, sawmill, post office, and stores. In 1914, the community remained small with a few scattered buildings at the intersection of the Baltimore and Potomac Railroad, and Glenn Dale Road. The Glendale station area did not develop as quickly as the land around the Seabrook or Lanham stations during the first half of the 20th century. By 1957, Glenn Dale remained a crossroads settlement with approximately 45 houses and a school. The small settlement of Brookland had been established to the north of Glenn Dale, while the Glenn Dale Heights subdivision to the south had been platted but not developed. Also to the south of Glenn Dale were the Glenn Dale Sanatorium and the Plant Introduction Gardens of the United States Department of Agriculture. Residential and commercial construction continued throughout the 20th century along the early roads, including Glenn Dale Road, Glen Road, Prospect Hill Road, Lansdale Street, Marietta Street, Patuxent Avenue, and Lanham-Severn Road. MD 193 (Greenbelt Road / Glenn Dale Boulevard) was constructed to the east of the community after 1974. Only a few of the early buildings survived to the present-day, including the Episcopal church, a Victorian-era house, several turn-of-the-century and early-20th-century houses.

Narrative:

Green Meadows is located in Prince George’s County, north of the District of Columbia boundary. The community is located on the west side of Ager Road near Riggs Road, in an area known as Chillum. In the early 20th century, Chillum was largely agricultural, consisting of small truck farms and a cross-roads community at the intersection of Chillum Road and Riggs Road. Since this area was not serviced by public transportation, such as a streetcar, Chillum remained rural in character into the 1930s. Beginning in the mid-1930s, the area of Chillum that is close to the District of Columbia border was subdivided into lots. Developers promoted the area’s convenient access into the city as well as its water, gas, and electricity supply. The first platted developments in the late 1930s included Chillumgate and Oakdale Terrace. These communities sold only building lots for house construction and were slow to develop. In contrast, the developer-built Green Meadows was platted in the early 1940s and completed by 1942. The street pattern of Green Meadows is a fragmented grid of curved parallel streets. The houses are primarily two-family attached units constructed of brick or brick and frame. The Green Meadows subdivision was extended on its south end by two streets in 1957. Community features included the Ager Road School completed by 1942 and two community parks established by 1957. The school no longer appears on present-day maps.

Narrative:

Greenbelt is located north of the District of Columbia in Prince George’s County. Designed as a New Deal model community, Greenbelt was constructed on part of a 12,000-acre tract purchased by the Federal government in the mid-1930s. Among the goals of the community were to provide work for unemployed men, build low-rent housing, and create a healthful environment for families. The site was selected due to its proximity to the District of Columbia, existing schools, and location next to the Beltsville Agricultural Research Center (BARC). If the community failed, then the entire parcel could be absorbed into the research center. Construction of the community involved only a small portion of the purchased land, with the remaining acreage used as a buffer from encroaching development and used by the BARC.

The entire community, including dwellings, streets, schools, stores, and parks, was designed prior to the start of construction in 1935. The two main roads were arranged in a crescent shape along which shops, schools, municipal buildings, and recreational facilities were placed. The residential buildings were clustered into “super blocks” of 12 to 18 acres containing 120 dwellings each. Upon completion of the initial construction project, the community contained 885 units in buildings designed in the Art Deco style, like the rest of the structures. In September 1937, the first of Greenbelt’s residents selected from a pool of 12,000 applicants moved into their new homes. The units rented for between $18 to $41 per month. The residents comprised a cross-section of the region’s population representing various professions and religions, though all residents were white.
COMMUNITY SUMMARY SHEET
Community Name: Greenbelt

Narrative (continued):

The community transferred from the Resettlement Administration to the Farm Security Administration in 1936, then incorporated as the Town of Greenbelt in 1937. In an effort to house defense workers during World War II, 1000 additional units were constructed in 1941. The additional residents resulted in the construction of the North End Elementary School in 1945 and an addition to the Greenbelt High School. Bus service began in 1945 to transport residents from throughout Greenbelt to the town center. The status of the community changed from a town to a city in 1949, in response to continued development. After years of negotiations, city residents under the organization name of the Greenbelt Veterans Housing Corporation (later Greenbelt Homes, Inc.) purchased the community from the Federal government in 1952.

Spurred by the completion of the Baltimore-Washington Parkway in 1954, a number of developments were constructed in Greenbelt during the 1950s. These new communities included Lakeside (1953), Woodland Hills (1955), Lakewood (1959), Greenbelt Plaza Apartments (1959), Lakeside North, Charlestowne Village, Lakecrest, and Boxwood Village. The 1960s brought three major developments to Greenbelt. In 1960, the NASA Goddard Space Flight Center was established adjacent to the community and bringing jobs to the region. Partially in response to the need for more housing in the area, the large Springhill Lake Apartment complex was constructed between 1963 and 1964. Adjacent to the Springhill Lake Apartments and along Greenbelt Road, the Beltway Plaza Shopping Center (Beltway Plaza Mall) was constructed in 1962. The 1970s and 1980s brought further development of residences, office buildings, and retail facilities, resulting in a diminishing amount of green space in Greenbelt. In 1994, the METRO opened the Greenbelt station on the south side of the Capital Beltway (I-495).

Narrative:

The community of Highland Park is located in Prince George’s County, east of the District of Columbia boundary. Highland Park, settled in the early 1920s by African-Americans, is one of several subdivisions constructed in the early to mid 20th century around the Town of Seat Pleasant. Suburban development in this area of Prince George’s County began in the late 19th century and continued to grow throughout the 20th century due to its proximity to Washington and access to the city via railroads, streetcar lines, and road networks. The early 20th-century communities were fostered by the Chesapeake Beach Railroad (1898) and the Washington, Baltimore and Annapolis Electric Railroad (1908). As the popular mode of transportation shifted from streetcar line to the automobile in the 1930s and 1940s, highways gave suburban residents access to the city. The George Palmer Highway (present-day Martin Luther King, Jr. Highway) was constructed on the right-of-way of the Washington, Baltimore and Annapolis Electric Railroad in the early 1940s. The Highland Park development benefited from its location along the Washington, Baltimore and Annapolis Electric Railroad, later the George Palmer Highway.

Highland Park is located at the southwest corner of the intersection of Martin Luther King, Jr. Highway and Hill Road. The community was settled by African-Americans in the early 1920s through the construction of a few scattered houses. By 1942, Highland Park contained approximately 60 houses, two churches, and one school located within a grid of 12 blocks on both sides of Martin Luther King, Jr. Highway. The school and one of the churches was located on the south side of Martin Luther King, Jr. Highway.
construction along the streets continued into the 1980s, creating a streetscape of houses from various time periods and stylistic influences.

In 1955, the Booker T Homes were constructed adjacent to the west side of Highland Park on both the north and south sides of the Martin Luther King, Jr. Highway. The Booker T Homes were brick and frame duplexes of 1152 square feet in size constructed in 1955. The roads of the subdivision form a fragmented grid pattern, introducing curvilinear roads and cul-de-sacs not found within Highland Park.

By 1970, the Highland Park School was occupied by the Board of Education and no longer functioned as a school. It is now the location of the Highland Gardens Neighborhood Park. Another park, located on the north side of Martin Luther King, Jr. Highway and west of the Booker T Homes, is known as the Booker T Homes Park.

Narrative:

The neighborhood of Hollywood is located within the municipality of College Park, north of Washington, D.C., in Prince George’s County. The community is surrounded by the neighborhoods of Daniels Park, Autoville, Sunnyside, and Greenbelt.

Hollywood was developed beginning in the early 20th century along the City and Suburban Electric Railroad (later Rhode Island Avenue). The neighborhood was incorporated as part of the City of College Park in 1945. Edward Daniels, the developer of Daniels Park in 1905-1906, planned the Hollywood subdivision as a northern extension of that earlier community. Development in Hollywood was limited to a few small wood-frame houses south of Lackawanna Street until after World War II. Albert Turner acquired large tracts of the neighborhood north of Lackawanna Street in the late 1940s. With newly available water and sewer lines, Turner was able to develop and market brick and frame three-bedroom bungalows on lots of approximately 6000 square feet beginning in 1950. By 1952, an elementary school had been built to serve the growing population which had reached 4000 by 1955.

Other property uses within Hollywood include commercial and recreational. Commercial properties developed along Rhode Island Avenue and Baltimore Avenue throughout the history of the community. The Hollywood Park, a 21-acre facility along the B&O Rail line, is operated by the Maryland-National Capital Park and Planning Commission (Neighborhoods 1974, 112).

Narrative:

The neighborhood of Huntsville is located in Prince George's County, northeast of the District of Columbia boundary. It is bounded on the north by Columbia Park, on the east by the Martin Luther King, Jr. Highway, on the south by Sheriff Road, and on the west by industrial parks.

Settlement began in Huntsville between 1914 and 1917 as a crossroads community at the intersection of Sheriff Road with the Washington, Baltimore and Annapolis Electric Railroad. Only a few scattered buildings were located along the rail line and along a road extending north to the community of Columbia Park in 1917. By 1942, the community of Huntsville contained approximately 40 structures along eight streets forming a grid pattern. The street names were obviously influenced by the community's location along the streetcar line, including such names as Washington, Annapolis, and Electric Avenues. The streets were unpaved, narrow, lacked sidewalks, and had no provision for adequate drainage. The community is labeled on USGS maps as Huntsville and White House Heights in 1957 with approximately 60 residences. The community grew with additional residential construction through the 1960s. Housing stock of the neighborhood includes older Bungalow-style residences and later developer-built ranchers and cottages.

By 1957, a large industrial complex had developed to the west of Huntsville. Cabin Branch Warehouse complex includes distribution centers for supermarket chains, bakery, meat processing plant, automotive parts, Red Cross storage facility, and other industrial facilities, including a brickyard on the west side of Cabin Branch. The brickyard closed prior to 1970 and was used by a concrete products company. Presently, this industrial area is known as the Cabin Branch Industrial Center and the Maryland 50 Industrial Park.

KCI Technologies, Inc.
October 1999
Community services such as schools and fire and police protection are provided by adjacent towns. Recreation facilities are provided by the Kentland Community Center Park located on the north side of Huntsville/White House Heights.

Narrative:

The municipality of Hyattsville is located close to the Washington, D.C. border in Prince George's County, Maryland. It is surrounded by the communities of University Park, Edmondston, North Brentwood, Brentwood, and Mt. Rainier. Hyattsville was developed beginning in 1873 on lands owned by Christopher Hyatt, around the small store and post office established by Hyatt in the wedge of land between the Washington Turnpike and the B & O Railroad. The area was incorporated in 1886. Hyattsville was subdivided into building lots by Benjamin F. Guy and Christopher Hyatt. Guy sold lots east of the railroad tracks and Hyatt subdivided land to the west of the tracks. The roads were laid out in an irregular grid pattern (Neighborhoods 1974, 72). The suburb attracted residents from Washington, D.C. looking to escape the congestion of the city. White collar government workers, lawyers, and engineers built both summer cottages and year-round single-family residences in a number of styles, including Queen Anne, Gothic revival, and Italianate, as well as more modest residences using traditional building forms. New residential lots were platted and improved through the 1890s (Hyattsville 1980, Section 7). After incorporation in 1886, there were increased public services offered to the residents. By 1893, improvements included a public school, telephone and electric service, an amateur baseball team, four churches, improved streets and sidewalks, street lighting, and a volunteer fire company. In 1899, the City & Suburban Railway Company extended streetcar service into Hyattsville, traveling from Washington, D.C., through what would become Mt. Rainier, Brentwood and North Brentwood, through Hyattsville, and into Riverdale. Hyattsville’s commercial area included small grocery stores and butcher shops, coal and wood dealers, a pharmacy, a drygoods store, a livery stable, and a newspaper. The streetcar followed along the route of present-day Rhode Island Avenue (Denny 1997, 214).
COMMUNITY SUMMARY SHEET
Community Name: Hyattsville

Narrative (continued):

Growth continued into the early 20th century. A town hall was erected in 1912, a grand armory was built in 1918, and a library was built in 1921. Residential areas continued to expand in the early 20th century, as a result of increased automobile traffic along the Route 1 corridor. In 1929, Rhode Island Avenue was extended northward across the Northwest Branch of the Potomac River, utilizing part of the streetcar right-of-way and connecting with Route 1. Residential areas developed in the 1920s with small frame cottages and bungalows. Growth continued through the 1950s with the annexation of existing subdivisions and the development of multi-family units (Neighborhoods 1974, 73).

Narrative:

Jenkins Corner is located southeast of the District of Columbia, in Prince George’s County. The community developed at the intersection of Brandywine Avenue, Branch Avenue, and Kirby Avenue. Wolverton Park is located to the north of Jenkins Corners, with Andrews Air Force Base to the east, Dorchester Estates to the south, and Ramblewood Village to the west. Early development consisted of scattered residential buildings. Despite the lack of public utilities, such as sewer and water lines, the proximity of this area to the District of Columbia prompted growth. The first organized development at the Jenkins Corners crossroad was the Woodland subdivision in the early 1940s. Located at the southwest corner of Brandywine Road and Kirby Road, the development consisted of two streets extending west from Brandywine Road and contained approximately 12 houses by 1942.

By the early 1960s, the small Woodland subdivision had been surrounded by new developments. The communities of Wolverton Park, Dorchester Estates, and Ramblewood Village were all constructed between 1959 and 1961. The residents of this area depend on regional schools and retail centers located along Branch Avenue.

Bibliography:

United States Geological Survey. *Map of Prince George’s County (7.5-minute).* 1927.

Kentland is located east of the District of Columbia in Prince George’s County. The community is bounded on the north by Landover Road, on the east by Martin Luther King, Jr. Highway, on the south by Columbia Park, and on the west by the Kentland Community Park. The community of Kentland was constructed on land owned in the mid 19th century by Charles White, a farmer and iron founder from Baltimore. In the mid 20th century this land was dramatically changed to provide housing for thousands of returning World War II veterans.

After World War II, the undeveloped land along the newly constructed Martin Luther King, Jr. Highway (formerly George Palmer Highway) and along Landover Road was ideal for development due to its proximity and easy access to the District of Columbia. Kentland was developed on the south side of Landover Road in the late 1940s and contains several subdivisions and phases of construction. Construction began with Kent Village, an 810-unit apartment complex and one of the earliest complexes in the surrounding area. Construction of apartment complexes in Kentland was followed by the building of single-family detached houses in Kent Village. A number of two- and three-family dwellings were constructed during the 1950s in Kentland and Kent Village. In general, the multi-family buildings are brick and frame with two stories without a basement. Also built in the 1950s was a subdivision of rowhouses named Kentwood. The Kent Village Shopping Center was
Narrative (continued):

constructed adjacent to the Kent Village Apartments by 1957 and the adjacent Dodge Park Shopping Center was constructed in the early 1960s.

Other community features include a fire station and parks. The Kentland Community Park Center located at the west end of the neighborhood was created from the former Bearverdam Country Club. Residents rely on Glenarden’s Municipal Center for meeting space and on schools in neighboring communities.

Narrative:
The neighborhood of Lakeland is located within the City of College Park, north of Washington, D.C., in Prince George’s County, Maryland. Lakeland was developed beginning in 1892 around the B & O Railroad, which runs through the eastern portion of the community. The Branchville and Calvert Road depots were located approximately one mile to the north and south, respectively. Lakeland was created by Edwin Newman. Newman improved the original 238 acres located to the west of the railroad between the Paint Branch and Indian Creek with gas lights, curbs, gutters, wooden sidewalks and dirt streets laid out in a grid pattern. Newman also built a number of the original homes, a small town hall, and a general store. The area was originally envisioned as a resort-type community around Lake Artemisia (Denny 1997, 118). However, due to the flood-prone, low-lying topography, the neighborhood attracted a lower-income population than the surrounding neighborhoods of College Park and Berwyn Heights, and Lakeland became an area for African-American settlement. The single-family residences built consisted of modest 1- and 2-story frame houses, often with shingle siding. Around the turn of the century, the Baltimore Gold Fish Company built five artificial lakes in the area to spawn goldfish and rare species of fish, which were then shipped elsewhere. The African-American population had increased significantly around 1900, and a one-room school was built in 1903. The school soon was too small, and a new school was built in 1925. Most of the land (68%) remains undeveloped, despite more homes being built following the development of the City & Suburban Electric Railway through the area after the turn of the century. The area was incorporated as part of College Park in 1945 (Neighborhoods 1974, 97).

Narrative:

Landover Hills is located north of the District of Columbia in Prince George’s County. In 1940, the community was developed by Monroe and Dorothy Warren on approximately 148 acres of farm and forested land between Annapolis Road (Defense Highway MD 450) and the Pennsylvania Railroad line. The Warrens laid out a curvilinear pattern of roads and constructed model homes priced between $3000 and $4000. By 1943, the section of Landover Hills between Annapolis Road and Taylor Avenue had been completed and houses were under construction south of Taylor Avenue. The town was incorporated in 1945, in an effort to improve road conditions and community safety. In 1945, the police and fire departments organized.

By the mid to late 1940s the Landover Hills subdivision was joined by the adjacent developments of Radiant Valley, Landover Knolls, Landover Estates, and Bellemead. The housing stock of these developments consists of developer-built brick and frame buildings in the ranch and cottage forms. Increased population and the opening of the Capital Beltway in 1964, resulted in the construction of numerous apartment buildings and complexes along Annapolis Road. Approximately 2000 units had been constructed by 1970.

Commercial development in the Landover Hills area extends along Annapolis Road. In 1948 the Landover Hills Shopping Center was built and included Chandler’s Drugs and Cole’s Supermarket. Other stores soon followed. The community includes a small park, though the Landover Hills Elementary School closed in 1983. The town’s students must travel to schools in adjacent communities.

Narrative:

Langley Park is located north of the District of Columbia in Prince George’s County. The community is bounded on the north by the Northwest Branch of the Anacostia River, on the east by Riggs Road, on the south by University Boulevard, and on the west by New Hampshire Avenue. The area developed in the late 1940s through the 1960s along the extended route of New Hampshire Avenue, which provided easy access into the District by automobile. Also, the construction of new water and sewer lines through the area during the same period made the land desirable for development.

Most development in the area prior to the development of Langley Park was in the form of garden apartment complexes. Between 1949 and 1955, the population of the Langley Park area increased from a few residents to over 5000. This growth is largely due to the construction of multi-family units, with this area having the highest population density per acre than anywhere else in Prince George’s County in 1955. In contrast, the single-family Langley Park development opened in the early 1950s with the construction of one-story brick ranches along a curvilinear pattern of streets. The construction of apartment complexes continued around the Langley Park subdivision throughout the 1960s and 1970s.
In the 1950s and 1960s, several shopping centers were constructed at the intersection of New Hampshire Avenue and University Boulevard. The Langley Park Shopping Center was the largest shopping facility of its kind in the County in 1959. Langley Park does not contain any community buildings and must rely on adjacent neighborhoods for public services and meeting space. The subdivision, however, is adjacent to two schools, the Langley Park and McCormick Elementary Schools.

Narrative:

Lanham is located northeast of the District of Columbia in Prince George’s County. The name applies to a geographic region of several 20th-century developments constructed around the Lanham station of the Washington Branch of the Baltimore and Potomac Railroad. The railroad’s main branch into Washington opened in July 1872, with stations established at Glenn Dale, Seabrook, and Lanham, among others. A small cluster of late-19th- to early 20th-century houses were constructed around the station on Lanham Station Road. This north-south road extends from the station to Whitfield Chapel Road, along which are houses dating from 1900 to the present-day.

Within walking distance to the north of the Lanham station developed the late-19th-century subdivision of Hynesboro Park. Named after Colonel Hynes who settled on the land after the Civil War, the development was first utilized as a “summer colony” for city residents, then evolved into a year-round community. Adjacent to this development, Princess Gardens was platted in 1903. Houses on this tract were placed on large lots of one to three acres that retained the rural character of the community. A third community that developed around the Lanham station in the early 20th century was Greenwood. Located on a wedge-shaped piece of land between the railroad line and Annapolis Road (Defense Highway MD 450), the developers of Greenwood promoted the development as close to Washington with a “city” water supply, since Lanham had an early water system based on wells.

KCI Technologies, Inc.
October 1999
COMMUNITY SUMMARY SHEET
Community Name: Lanham

Narrative: (continued)

The Lanham area quickly developed after World War II with the construction of several subdivisions along Whitfield Chapel Road south of the railroad line. These developments include Lanham Acres, Lanham Heights, Cunningham Acres, Westgate Woods, and Whitfield Knolls. One apartment community, Whitfield Towne Apartments, was constructed adjacent to the early Lanham subdivision in 1965. The complex consists of eight buildings containing 330 units. The housing types in the Lanham area span from large frame residences to developer-built modern ranches and cottages.

Other land uses in the Lanham area include the Lanham Shopping Center on Annapolis Road and the Whitfield Chapel Road on Whitfield Chapel Road.

Narrative:

Lincoln is located east of the District of Columbia in Prince George’s County. The community is bounded on the north by Glenn Dale, on the east by undeveloped land, on the south by Buena Vista, and on the west by Glenwood Park. The community was platted in 1908 by the Lincoln Land and Improvement Company and Thomas J. Calloway, an African-American businessman from the District of Columbia. Located adjacent to the Washington, Baltimore and Annapolis Electric Railroad, the community was envisioned as a vacation retreat and garden suburb for African-Americans. The construction of the Washington, Baltimore and Annapolis Electric Railroad through rural Prince George’s County prompted a wave of growth along the length of its line. In particular, two other African-American communities, Glenarden and Fairmount Heights, were developing along the streetcar line during the first decades of the 20th century.

The Lincoln Land and Improvement Company planned for the Lincoln and Chautaqua sections of Buena Vista. The original plan for the Lincoln community included a crescent-shaped street adjacent to the rail line providing a ceremonial entrance into the community. The streets of the town radiate outward from the circle. The Chautaqua section included a large grid pattern subdivision located north of Lincoln. The streets of the Chautaqua section were ploughed-out and graded, though the construction of houses did not occur. The Lincoln development was somewhat more successful with many dwellings constructed in the 1910s and 1920s on large lots. During the 1960s and 1970s, many of these lots were re-subdivided for infill construction.

Narrative:

The community of Maryland Park is a part of the incorporated Town of Seat Pleasant. It is located in Prince George’s County adjacent to the eastern corner of the District of Columbia. Based on available information, including historic maps, Maryland Park was developed in the first half of the 20th century. According to the 1878 Hopkins map of Prince George’s County, Maryland Park was developed on land owned by John Wiessner. Wiessner was responsible for the platting of the Mount Wiessner subdivision near Fairmount Heights in 1909 and had a residence on this land. Development of Maryland Park does not appear on maps until 1914.

The USGS map of Washington and Vicinity shows several roads and residences. The main road is 65th Avenue (now Maryland Park Drive). This road begins at the junction of the Washington, Baltimore and Annapolis Electric Railway and Chesapeake Beach Railroad in the District of Columbia and extends southwest to Central Avenue. Off of this main road are short dead-end residential streets. Six streets extend to the north of Maryland Park Drive and three extend south. On the north side of Maryland Park Drive, the residential streets end at the tracks for the Chesapeake Beach Railroad. Approximately 65 structures appear along these streets. By 1914, the developed streets include (from north to south) present-day Dade Street, Coolidge Street, Crown Street, Burgundy Street, Baltic Street, Athena Street, and the side streets Yacht Street and Yost Street.
COMMUNITY SUMMARY SHEET
Community Name: Maryland Park

Narrative: (continued)

The engine house, principal yard, and shop buildings of the Chesapeake Beach Railroad were located in Maryland Park after the construction of the line in 1898. The buildings were located in a wedge of land between the railroad tracks, Maryland Park Drive and Central Avenue.

In 1917, approximately 90 structures are present in Maryland Park including one church. By 1936, the community expanded to include two additional streets, Davey Street and Eagle Street. Present-day Early Street was laid-out by 1942. Between 1936 and 1942, the Maryland Park High School was constructed. The school was used until 1972, when it was deemed no longer serviceable. A drastic change occurred in the 1970s and 1980s when Central Avenue and the METRO blue line were located through the center of the community to connect with East Capitol Street.

Narrative:

Morningside is located southeast of the District of Columbia in Prince George’s County. It is bounded on the north by the Suitland Parkway, on the east by Forestville Road, on the south by the Capital Beltway (I-495), and on the west by Suitland Road. Development was attracted to this area in the 1940s and 1950s, due to the construction of Andrews Air Force Base in the early 1940s, and the proximity of the region to the District of Columbia. The installation of water and sewer lines into the area in the late 1950s and early 1960s, promoted additional growth.

Morningside was developed by Morgan Wayson and Randolph Hopkins on a 100-200 acre farm owned by the Thomas family. Wayson and Randolph purchased the property in 1938 and 1939, then constructed 100 low-cost houses in 1940. After a three-year pause in construction, an additional 200 houses were constructed. The development consists of nearly identical Cape Cod houses on a curvilinear street pattern. Street flooding and sewerage problems prompted the community to incorporate in 1949. In 1954, the Washington Suburban Sanitary Commission constructed water and sewer lines through town and the Morningside Elementary School was built. The following year Suitland Road was paved through Morningside. The rest of the towns streets would not be paved until 1979, when a street improvement campaign paved all the streets and installed new storm drains, gutters and sidewalks.

The first municipal building was a structure in the same style and form as the houses, though the interior had a single room. This building was used until a new municipal center was constructed in 1978. The first fire station was constructed in 1945, after a fire in the community took the lives of three residents. In 1995,

Narrative:

The municipality of Mount Rainier is located adjacent to the northeast boundary of the District of Columbia in Prince George’s County. It is also adjacent to the communities of Brentwood and Hyattsville. Subdivision plans for Mount Rainier were first developed in the early 1890s by Lieutenant James Estcourt Sawyer. Building lots were platted, streets laid out, and trees planted; however, no lots were sold during the Sawyer ownership despite the extension of the City and Suburban Electric Railway through the subdivision in 1897. Sawyer sold the Mount Rainier subdivision in 1903 to a group of local investors who retained much of the original layout. The street pattern of the community is influenced by the grid pattern established in the adjacent District of Columbia. However, the street grid is broken by a few diagonal and curvilinear roads that pre-date the community’s settlement and follow the general topography of the area.

Eight other subdivisions were platted adjacent to the original Mount Rainier subdivision during the first decade of the 19th century. By 1910, the number of houses constructed numbered 163. Most of these residences were located close to the streetcar station in an area that also developed into a commercial center. The town was incorporated in 1910, after the population numbered over 1000. The town began a number of improvements in 1919, including the installation of a water and sewer system and the paving of streets, sidewalks, and gutters. By 1929, the town had added police and fire protection to its services.
The size of the average building lot throughout the community was between 40 and 50 feet wide and 120 to 150 feet deep. Most houses had a setback of 15 to 20 feet from the front of the lot. The average lot costed between $375 to $600, making the subdivision affordable for middle-class buyers. Common housing types constructed within Mount Rainier include residences influenced by the Queen-Anne style, I-houses, Four-squares, Bungalows, Sears Mail-order houses, and vernacular forms with hipped roofs, gable-front-and-wing plans, and flat-fronts. By the 1930s, the town had expanded to its corporate limits, and most construction activity focused on infill construction of houses on empty lots.

Coinciding with a surge of Federal employees during the 1930s, numerous brick apartment buildings were built. The construction of apartment buildings continued in Mount Rainier into the 1950s. The design of early apartment buildings in Mount Rainier was influenced by the Colonial Revival and Neo-Classical styles, while later apartment structures were influenced by the International style. After World War II, numerous garden-style apartment complexes were constructed on the north and west sides of the community.

Commercial buildings in Mount Rainier have historically been centered at the streetcar station and along the Rhode Island Avenue (the path of the streetcar line). The earliest commercial buildings were two-story flat-front buildings containing commercial space on the first floor with residential space above. In the 1930s, larger mixed-use buildings were constructed along with rows of one-story storefronts. Other non-residential buildings include a gas station, theater, lodge, and churches. Mount Rainier has five 20th-century churches constructed in styles influenced by the Neo-Classical, Gothic and Romanesque Revivals.

The population of Mount Rainier reached a peak of nearly 11,000 inhabitants in the 1950s, due largely to the construction of apartment complexes. Since 1950, the population has decreased. By 1970, the number of residents had dropped by almost 2500. Since that time, development in Mount Rainier has been confined to the few remaining parcels and lots within the existing community. A large portion of the community was listed on the National Register of Historic Places on September 7, 1990.

Bibliography:

New Carrolton is located north of the District of Columbia in Prince George’s County. The community is bounded on the north by Good Luck Road, on the east by the Capital Beltway (I-495), on the south by the right-of-way of the Pennsylvania Railroad line, and on the west by the Wildercroft subdivision.

Albert W. Turner, president of the Modern Construction Company and the developer of Lewis Heights and Hollywood, purchased a tract of land at the intersection of Annapolis Road (MD Route 450) and Riverdale Road in the early 1950s. The developers were granted a charter of incorporation prior to the construction of any houses. The first houses were constructed and sold in the City of Carrolton in 1956. By 1963, all 1800 houses in the first section of Carrolton had been sold. In addition to houses, the community contained two elementary schools, a junior high school, a swimming pool, playgrounds, and a shopping complex by 1963. The building of apartment complexes from late 1950s through the 1960s was spurred by the construction of the Baltimore-Washington Parkway in 1954 and the Capital Beltway in 1965.

Additional acreage was purchased in 1957 and developed land was annexed in 1964. In 1966, the name of the city was changed to New Carrolton to avoid confusion with two other Carroltons in the state. A commercial center was planned at the intersection of Annapolis Road and Riverdale Road in 1969. A hotel was constructed in 1969, followed by the Carrolton Mall Shopping Center in 1973. A major addition to the commercial land use in New Carrolton was the construction of the Internal Revenue Service headquarters in 1996.

### Narrative:

The municipality of North Brentwood is located north of Washington, D.C., and is surrounded by the communities of Hyattsville, Brentwood, and Cottage City. The Town of North Brentwood was incorporated in 1924, and was the first African-American municipality in Prince George's County.

The town was developed beginning in the 1890s around the Highland Station of the Washington Branch of the B & O Railroad and the Columbia & Maryland Electric Railway (which became the City & Suburban Electric Railway in 1898) which ran along Highland Avenue. Brentwood was created by Wallace A. Bartlett, a Civil War veteran, former foreman for the Government Printing Office, Patent Office examiner and inventor originally from Warsaw, New York. Captain Bartlett lived in Washington, D.C. until 1887, when he purchased 206 acres of farmland from Benjamin Holliday, which abutted the Highland subdivision. Bartlett built a farmhouse for his family on the land and, with two partners, J. Lee Adams and Samuel J. Mills, formed the Holladay Land and Improvement Company. In 1891, the Company platted a residential subdivision called "Holladay Company's Addition to Highland" on 80 acres of the Bartlett Farm. The lots were approximately 40 feet by 100 feet, and were arranged along streets forming an irregular grid of streets. The lots in the northern part of the subdivision, which eventually would become North Brentwood were smaller and were subject to flooding from a mill race (Pearl 1992, 5-8). The first lots in the northern section were purchased in 1891 by Henry Randall, an African-American man from Anne Arundel County, who built a house on Holladay Avenue (now Rhode Island Avenue). In 1894, Randall's son, Peter Randall, constructed a house next to his father's. More family members moved into the community and built homes, and the area soon became known as Randallstown.
Narrative (continued):

Other African-American families soon moved to the neighborhood, including the Plummer, Wallace, and Johnson families. They built two-story front-gable frame houses, as well as free-standing rowhouses. In 1898, the City and Suburban Electric Railway was completed through Randallstown. In the early 1900s, the development of Randallstown out-paced development in the southern areas also platted by Bartlett. A school and a church were built in 1904, and the Brentwood Colored Citizens Association was formed in 1907. The association helped acquire volunteers for a fire company, fire fighting equipment, a community hall, and electric lights. The town was incorporated in 1924. During this time period, larger house types such as Four-squares began to be built, as well as some commercial buildings (Denny 1997: 279-284).

The town continued to grow after incorporation. During the 1930s and 1940s, new homes were built, mostly bungalows and brick Cape Cod houses. New streets were laid out, while the existing streets were paved, extended, and renamed (Pearl 199, 61).

Narrative:

Oxon Hill is located south of the District of Columbia in Prince George’s County. Oxon Hill is the name of geographic area containing numerous subdivision developed during the 20th century. The area is roughly bounded on the north by the Capital Beltway (I-495), on the east by Rosecroft Drive, on the south by Henson Creek, and on the west by the Potomac River.

The Oxon Hill area was first settled in the 1600s, with the establishment of the St. Elizabeth farm. In 1695, the land came into the ownership of Colonel John Addison who constructed a manor house on the property. Addison, being a graduate of Oxford University and acknowledging the tradition of calling graduates of the university “Oxonians,” he applied the name Oxon Hill to his estate. By the 19th century, the area was still quite rural with only two small crossroads developments at the intersection of major transportation routes. Two such crossroads that appear by the late 19th century include Grimesville (later Phelps Corner) and Gilmans Corner. The settlements included churches, a few residences, and stores. By 1917, the Oxon Hill School was constructed to service the rural communities and surrounding farms. In 1929, the Oxon Hill manor house was destroyed by fire and replaced by a Georgian Revival structure. The property became a public park after the 1970s.
Intensive development of the Oxon Hill area did not begin until the 1940s and 1950s. The construction of the Indian Head Highway (MD 210) by the Federal government during World War II directed a path of development south from the District of Columbia. The main east-west routes of Oxon Hill Road and Livingston Road provided access to the north-south Indian Head Highway from numerous developments platted in the 1940s and 1950s. The construction of a trunk sewer line along the highway in the 1950s resulted in the developments of Southlawn, Kerby Hills, River Ridge Estates, and Livingston Oaks. Other development, such as Potomac Vista and Fort Foote Village, took advantage of the Potomac River waterfront. Further to the west, another 1950s subdivision called Rosecroft Park was constructed adjacent the 1940s Rosecroft Race Track.

The construction of the Broad Creek-Henson Creek trunk sewer line in the 1960s extended development east from the Indian Head Highway. The time of construction for the sewer line coincided with the nearly construction of the Capital Beltway (I-495) and a growing preference for apartment living. The construction of the Wilson Bridge Apartments and Wilson Towers coincided with the construction of the Beltway in 1964. Other apartment complexes included the Riverside Plaza, Portobello Apartments, and Brinkley House Apartments. The additional development and rise in population resulted in the construction of schools and shopping centers throughout the second half of the 20th century.

Narrative:

Parkland is located southeast of the District of Columbia in Prince George’s County. The community is bounded on the north by District Heights, on the east by the Berkshire subdivision, on the south by Pennsylvania Avenue (MD 4), and on the west by Old Silver Hill Road.

Despite the lack of public utilities and no public transportation into the District of Columbia, several communities were established along Marlboro Pike in the early 20th century, including Parkland, Forestville, and District Heights. Parkland was developed by William A. Hitt on land purchased from Nannie Purdy in 1919. The first subdivision of Parkland was platted in 1925. The plat consisted of a triangular tract of land at the intersection of Suitland Road (now Old Silver Hill Road) and Marlboro Pike. Two new streets were platted named Maryland Avenue (now Parkland Drive) and Addison Road. Maryland Avenue was laid out along an existing farm lane. The 50-foot-wide lots fronted on all streets. In 1936, Hitt platted an addition to Parkland consisting of one street, Kentucky Avenue, connecting present-day Old Silver Hill Road with present-day Parkland Drive. By 1942, the community contained approximately 80 houses. Subsequent development of Parkland consisted of building on vacant lots along the existing roadways. The growing south end of the community was cut-off from the rest of the community in the early 1960s by the construction of Pennsylvania Avenue (MD 4). This area contained the Detwiller School and a development named Taylor Gardens. The surrounding Parkland area underwent significant changes in the second half of the 20th century, beginning with the widening of Marlboro Pike in the 1960s and followed by considerable commercial and industrial development. The community contains the Spaulding Branch of the Prince George’s County Library System.

Narrative:

Queens Chapel Manor is located in Prince George’s County, north of the District of Columbia boundary in an area known as West Hyattsville. The community is located in the northwest corner of the intersection of Queens Chapel Road and Ager Road. The subdivision was incorporated into Hyattsville in 1945.

During the early 20th century, development in the Hyattsville area was focused along the Baltimore and Ohio Railroad and the streetcar line of the City and Suburban Railway. Land to the west of this core was largely undeveloped and rural in character. In the 1930s, development spread west from the early core of Hyattsville and subdivisions such as Queens Chapel Manor, Castle Manor, Avondale and Green Meadows appeared. Developers of these subdivisions promoted the area’s convenient access into the city and its established utilities supply.

Construction of the Queens Chapel Manor subdivision began in the early 1940s. By 1942, the subdivision contained eight streets forming a typical street plan for the period. The streets formed a grid pattern broken by curvilinear streets. As the community extended to the northeast during the 1940s and 1950s, the street pattern became increasingly curvilinear. The early housing stock constructed between 1941 and 1943 consisted of single-family small brick residences of 792 square feet. The size of the average house increased to 1170 square feet during the second period of
Narative (continued):

construction between 1946 and 1949. In the early 1950s, houses were constructed between 910-1200 square feet. The last distinctive period of construction at the northeast end of the community occurred between 1964 and 1966, resulting in houses of 1216 square feet.

On the 1942 USGS Quadrangle Map of Washington and Vicinity, an airport is labeled directly south of the subdivision. The Queens Chapel Airport was replaced by a drive-in theater between 1942 and 1957. This is the present location of the West Hyattsville METRO station. The Orem Junior High School was constructed at the north end of Queens Chapel Manor between 1957 and 1965. Commercial activity in Queens Chapel Manor included the Queens Chapel Shopping Center at Hamilton Road and Queens Chapel Road. Additional commercial development occurred adjacent to the north end of the community in 1963 in the form of three high-rises known as the New Town Center Federal Building.

Narrative:

Randolph Village is located east of the District of Columbia in Prince George’s County. The community is bounded on the north by the Meadows of Manor Farm subdivision, on the east by Bright Seat Road, on the south by Central Avenue, and on the west by Summerfield Boulevard. Randolph Village was platted by Katherine and Edwin Spaulding in 1939 on land purchased from James Eslin in 1906 on the north side of Central Avenue. The 1939 subdivision plat consisted of lots fronting on Central Avenue and along two new streets parallel to Central Avenue. The west end of the subdivision had streets intersecting at 45 degree angles to the rest of the gridded streets. By 1941, when two blocks were re-subdivided by the Spauldings, several houses have been already been constructed on the lots fronting Central Avenue. Since the subdivision was not provided with public water or sewer lines, the 14,000-square-foot building lots were large enough to accommodate septic systems. In 1946 the land was sold to Henry Norair, acting as the Norair Corporation. Norair also owned land to the north of the subdivision. In 1947, the Norair Corporation submitted a plat for a minor re-subdivision of the subdivision, while a re-subdivision plat of 1953, redesigned the west end of the subdivision eliminating the angular streets and extending the existing grid of roads. By 1957, the community contained approximately 30 houses with the majority of those fronting on Central Avenue. Only 10 additional houses were constructed by 1965, and many of the originally planned roads were never laid out. This small community depends on neighboring towns for public services, shopping, and recreation.

### Narrative:

Riverdale Heights is located north of the District of Columbia in Prince George’s County. The subdivision is bounded on the north by Greenbelt Park, on the east by the Baltimore-Washington Parkway, on the south by the East West Highway, and on the west by Riverdale. The subdivision of Riverdale Heights was developed between the late 1920s and early 1960s.

Development of this tract was spurred by its location along or close to major roadways. Suburban homebuyers in this period were purchasing automobiles and utilizing bus lines in increasing numbers, therefore, proximity to major road networks was a major enticement. Riverdale Heights is located along Edmonston Avenue, a north-south route later rebuilt as Kenilworth Avenue. This road gave residents access to Bladenburg and the Bladenburg Road into the District of Columbia. The prosperity of adjacent Riverdale and nearby Hyattsville were also factors in the development of Riverdale Heights.

By 1942, the Riverside Heights subdivision contained a fragmented grid pattern of streets and approximately 200 residences. The common building types constructed were modest brick and frame cottages and ranchers. Most of the residences in the subdivision were developer-built.

Scattered commercial properties are located along Edmonston and Kenilworth Avenues. However, the center of commercial activity is clustered around the Riverdale Plaza, just south of the community. Riverdale Heights has no recreation facilities, though the middle school in adjacent Riverdale Hills has recreational facilities.

Narrative:

Riverdale is located north of the District of Columbia in Prince George’s County. The community is bounded on the north by College Park, on the east by Riverdale Heights, and the south by Edmonston, and on the west by University Park and Hyattsville. The town was developed by the Riverdale Park Company beginning in 1889 along the Washington Branch of the Baltimore and Ohio Railroad Company. The town was incorporated in 1920.

In 1800, Henri Joseph purchased 800 acres of land north of Blandensburg and began construction of the mansion known as Riversdale. Joseph deeded the house and land to his son-in-law George Calvert in 1804. The house and land remained in the Calvert family for three generations until sold to John Fox, president of the Riverdale Park Company in 1887. A grid pattern of streets were laid out along both sides of the Washington Line of the Baltimore and Ohio Railroad. The streets were named after presidents and other notable politicians. The community’s location along the rail line and close proximity to the Baltimore-Washington Turnpike (US Route 1) made the subdivision attractive to Federal employees in Washington. Access to the city became even easier after the extension of the City and Suburban Electric Railroad through Riverdale in 1899.

Although the lot owner could construct their own house, beginning in 1891, the manager of the Riverdale Park Company was constructing four to five speculative houses each year. The company also constructed a schoolhouse in 1895. By 1900, the community contained approximately 60 houses, a church, school, railroad station, and two stores. Additional development took place between 1915 and 1925 on the west side of US

COMUNITY SUMMARY SHEET
Community Name: Riverdale

**Narrative (continued):**

Route 1. Electric street lights were added in 1922, and water mains were installed in 1923. A volunteer fire department organized and constructed a station in 1924. The station was later enlarged to house the municipal offices until a new municipal facility was built in 1982. By 1929, the Riverdale Park Company was less active in construction activities and deeded several small parks and land unsuitable for development to the town.

The housing stock of Riverdale reflects its many phases of development. Victorian-era and Craftsman-style houses on large lots were constructed between 1890 and 1920, while Bungalows and wood-frame cottages on small lots were built between 1920 and 1945. After World War II a construction boom added 400 Cape Cod-style houses and ranchers.

Another large residential project in Riverdale was the Calvert Homes. This complex was constructed for workers in nearby defense industries. Located just south of College Park between US Route 1 and Edmonston Avenue, the complex consisted of one- and two-bedroom units on concrete slabs. This community was annexed into Riverdale in 1945, then closed and torn down in 1954.

Commercial properties are located at the intersection of the former streetcar line and Queensbury Road, and along US Route 1. The east side of the town is occupied by shopping center development along Kenilworth Avenue, primarily Riverdale Plaza. The town also has several parks and one school. The current school replaced an earlier school on the same site in 1978.

Narrative:

Roger’s Heights is located north of the District of Columbia in Prince George’s County. The subdivision is bounded on the north by 1950s-era subdivisions, on the south and east by Bladensburg, and on the west by Edmonston. Named after one of the former owners of the land tract, Rogers Heights was developed between 1938 and 1952.

Two factors contributed largely to the selection of this tract for development. First, the subdivision was located along or close to major roadways. Suburban homebuyers in this period were purchasing automobiles and utilizing bus lines in increasing numbers, therefore, proximity to major road networks was a major enticement. Rogers Heights is located along Edmonston Avenue, a north-south route later rebuilt as Kenilworth Avenue. This road gave residents access to Bladensburg and the Bladensburg Road into the District of Columbia. Residents could also travel west on Decatur Street to the growing center of Hyattsville or access US Route 1. The second factor in the settlement of Rogers Heights was the availability of public sewer lines from Bladensburg.

By 1942, the Rogers Heights subdivision contained ten residential blocks and approximately 200 residences. The streets were laid out in a grid pattern with three roads extending east from Edmonston Avenue intersected by five north-south streets. Roads constructed between 1942 and 1957 to the east of the earlier blocks were slightly more curvilinear. The common building type constructed was the modest brick and frame ranch.
COMMUNITY SUMMARY SHEET
Community Name: Rogers Heights

Narrative: (continued)

Scattered commercial properties are located along Edmonston and Kenilworth Avenues. However, most of the retail facilities are clustered around the Riverdale Plaza, in nearby Riverdale. Rogers Heights has no recreation facilities or schools and must rely on adjacent communities for such services.

Narrative:

Seabrook is located northeast of the District of Columbia in Prince George’s County. The community developed in direct relationship with the Washington Branch of the Baltimore and Potomac Railroad. The railroad’s main branch into Washington opened in July 1872, with stations established at Glenn Dale, Seabrook, and Lanham, among others. Thomas Seabrook, an engineer for the railroad, purchased 500 acres of land in 1871 around the location of a planned station for the purpose of creating a retreat community. By 1880, a station building and three Gothic cottages had been built, followed by commercial buildings and a schoolhouse. By 1914, the community remained small with just a few buildings located at the intersection of Seabrook Road with the Baltimore and Potomac Railroad. By 1957, the community has grown to include approximately 185 houses along 10 streets. The streets were arranged in a grid pattern roughly parallel to the railroad line. The community extended from present-day Good Luck Road south to Annapolis Road. Residential development continued on vacant lots within the community throughout the 20th century, while commercial development focussed along the main roads. Commercial strip development is located along Annapolis Road and Lanham-Severn Road. The railroad station and early commercial buildings are no longer extant, though the old schoolhouse and a few of the early dwellings survive.

Narrative:

The Town of Seat Pleasant is located in Prince George’s County, adjacent to the eastern corner of the District of Columbia. The community was first platted for development in 1873, though extensive development did not occur until after the extension of the Washington, Baltimore and Annapolis Electric Railroad through the subdivision in 1908. The center of the community formed along Martin Luther King, Jr. Highway, F Street, and Addison Street. The town was incorporated in 1931.

The Seat Pleasant was developed on the dairy farm of Joseph Gregory, the farm of the Hill family, and the land of building contractor Francis Carmody, among others. In 1873, some of the land along Addison Road was subdivided into small farms and rural home sites known as Jackson’s Subdivision. However, other modes of transportation had a greater impact on development in Seat Pleasant. In 1898, the Chesapeake Beach Railroad furnished a commuter service into the city in addition to excursions to the Chesapeake Bay resort area. The Columbia Railway Company operated a streetcar system that extended through Northeast Washington and terminated in Seat Pleasant at Eastern Avenue, near what is today Martin Luther King, Jr. Highway. Finally, the Washington, Baltimore and Annapolis Electric Railway passed through Seat Pleasant in 1908.
Seat Pleasant did not obtain its name until 1906. Prior to that year, it had been known as Chesapeake Junction. In May 1906, citizens met to consider the incorporation of their community, selected the name it bears today, and requested that a post office be established under that name.

Subdivisions were soon created, such as Seat Pleasant, Seat Pleasant Heights, Oakmont, Palmer’s, Boyer’s Addition, and Pleasant Hills. By 1915, two churches had been organized, and a fire department had been founded. The introduction of street lighting followed in 1918. By the community’s incorporation in 1931, Seat Pleasant had a population of over 200 families, a brick school, a water company, and some sewer connections to Washington’s sanitary system. The residential development of this period is characterized by Victorian-era houses and bungalows on narrow lots.

Residential construction continued through the second half of the twentieth century. After World War II, three low to moderate-income subdivisions were created on Joseph Gregory’s land for returning veterans. These developments were followed by the Gregory Estates apartments in 1949 and other low-income residential developments. The right-of-way of the former Washington, Baltimore and Annapolis Electric Railway was utilized in the early 1940s for the George Palmer Highway, later renamed the Martin Luther King, Jr. Highway. During the 1960s, the African-American population of Seat Pleasant began to increase, in what had previously been an all-white community.

The fire department and municipal offices were moved to new structures on Addison Road in the mid-1960s. The METRO system was constructed in the 1980s, providing a station just outside of Seat Pleasant on Addison Road. As a result, the Addison Plaza Shopping Center was constructed on land behind the fire station and municipal building. Centrally located within the town, Goodwin Park is a community recreation facility located on Addison Road next to the former Greendale Elementary School.

Narrative:

Suitland is located to the east of the District of Columbia in Prince George’s County. It evolved from a rural crossroads settlement in the 19th century to a region of modern subdivisions and Federal facilities in the 20th century.

The region gained the name Suitland after the construction of a store and post office on land adjacent to S. Taylor Suit’s farm of the same name. By 1878, the store and post office formed the nucleus of a small crossroads community located at the intersection of a rural lane extending west from Suit’s farm (Suitland Road) and the road to Silver Hill (Silver Hill Road). The crossroads also contained a Methodist Episcopal Church and a few residences.

By 1917, Suitland Road had been extended east beyond the Suitland farm to Marlboro Pike. Along this road, east of the Silver Hill Road intersection a subdivision called Suitland Park was platted. The subdivision consisted of 45 lots between two and 11 acres in size. In the 1930s, the demand for housing close to the District of Columbia was increasing. Most of the residential subdivision in the 1930s focussed on the west side of Silver Hill Road, where water and sewer lines reached first. Despite the initial lack of utilities, many of the large parcels within Suitland Park were re-subdivided for greater density. Small subdivisions named Navy Day and Crozier Gardens were constructed in the southeast and northwest quadrants of the Suitland Road - Silver Hill Road intersection, respectively. These developments contained modest frame cottages and bungalow-style houses.
The 1940s brought the most change to the Suitland area. The Federal government purchased 200 acres at the southwest quadrant of Suitland Road and Silver Hill Road. Upon this tract was constructed a complex of warehouses and storage buildings for the Department of the Census. In 1942, during a period of decentralization of the Federal government, the offices of the Census Bureau were moved to this location. The Census Bureau was followed by the U.S. Navy Oceanographic Office and the U.S. Navy Photo Interpretation Center. Federal government facilities in the area also included Andrews Air Force Base. In the 1940s, the Suitland Parkway was constructed.

In response to housing needs, nine acres of the Crozier Gardens development were re-subdivided into the Suitland Manor Apartments in the mid-1940s, while the Parkway Terrace Apartments were constructed in the late-1940s. The Suitland Manor Apartments are 2-story brick structures with common entrances providing access to four apartments. Construction within existing and new communities continued through the 1950s and 1960s with single-family, multi-family and apartment buildings. The building of apartment complexes was most rapid during the 1960s due to the proximity of Suitland to the District of Columbia, a surge in the popularity of garden-style apartments, influx of young couples, and influx of military personnel at Andrews Air Force Base during the Vietnam War. The extension of Pennsylvania Avenue through Suitland in the 1960s also spurred development. By 1970, apartment buildings comprised 80 percent of residential units in the Suitland area. A number of facilities have been constructed in the Suitland area during the 20th century to service the need of its residents, including several schools, a library, a nursing home, a post office, state police headquarters, and an electric utility station.

Narrative:

Temple Hills is located southeast of the District of Columbia in Prince George’s County. It is bounded on the north by St. Barnabas Road, on the east by Henderson Road and Henson Creek, on the south by Brinkley Road, and on the west by the Capital Beltway (I-495) and Brinkley Overlook.

The first settlement in this area was the late-19th-century gristmill at the intersection of Temple Road (now Temple Hill Road) and Henson Creek. The Temple Post Office was established at this location between 1878 and 1886. The area remained rural with few residences in 1917. By 1942, the name of Temple Road had been changed to Temple Hill Road and a residential subdivision was under construction at the intersection of St. Barnabas Road, Hagan Road, and Temple Hill Road. Housing within the Temple Hills development was characterized by developer-built single-family houses of Cape Cod, ranch and split-level designs. Additional development occurred further south on Temple Hills Road (now adjacent to the Capital Beltway) later in the 1940s. Development of this rural area in the 1940s was spurred by the establishment of Andrews Air Force Base in nearby Camp Springs and proximity to both the District of Columbia via Branch Avenue and Federal centers in Suitland. The completion of water and sewer lines in the area in the late 1950s and early 1960s fostered additional growth.

By 1965, the Temple Hills community contained three schools (Temple Hills School, Samuel Chase School, and School of Hope) and several additional subdivisions, including Temple Hills Park, Waggaman Heights, and Broadview.

Narrative:

According to information available from historic maps, scattered settlement in Tuxedo appeared along the Baltimore & Potomac Railroad (later the Pennsylvania Railroad) by 1886. The community is bounded on the north by the Town of Cheverly, on the south and east by the John Hanson Highway (US Route 50), and on the west by the B&O Railroad line. The settlement slowly developed along three blocks adjacent to the rail line. By 1917, the community contained approximately 20 houses, one church, and one school. Tuxedo grew to include two additional blocks and a total of approximately 50 residences and a new school by 1942.

Tuxedo has remained unincorporated, but shares services with the incorporated town of Cheverly, which was developed in the early 20th century. The second school constructed in Tuxedo was called the Cheverly-Tuxedo School and opened in 1923. This school and another facility in Cheverly remained in operation until 1991. Since that time, the Cheverly-Tuxedo School has functioned as a specialty education center. Another facility shared with Cheverly was the volunteer fire department. The Tuxedo-Cheverly Fire Station was constructed in 1930. This building has since been enlarged and is now operated by Prince George’s County.

Most of the land in and around Tuxedo has become industrial due to its proximity with the railroad line, the John Hanson Highway (US Route 50), and Baltimore-Washington Parkway (I-295).

Narrative:

University Park is located north of the District of Columbia, in Prince George's County. The town is bounded on the north by College Heights Estates, on the east by Baltimore Avenue (US Route 1), on the south by East West Highway, and on the west by Adelphi Road.

University Park was developed on land owned by the Deakins family since the mid-1700s. A house known as Deakins Hall or Bloomfield was constructed on the land in the 1820s or 1830s. The farm left the Deakins family ownership in 1923 when purchased by the University Park Company. The extension of water and sewer lines into area at that time prompted the subdivision of the Deakins tract. The developers promised a community of single-family homes without the intrusion of commercial facilities. Restrictive covenants were placed on the deeds and all house plans had to be approved by the developers. Homebuyers were attracted to University Park due to its high elevation and lush vegetation. The developers also agreed to provide streetlights and trash removal for a 10-year period, and constructed a school in the mid-1920s.

After the period of services provided by the development company expired in 1933, the citizens formed a community association to continue trash removal and street maintenance. By 1936, the responsibility of providing services for the growing subdivision proved too large for the community association and University Park was incorporated in 1936. By 1940, the community had grown to 293 houses. The size of the town nearly doubled between 1940 and 1950, with the construction of another 255 houses. Houses constructed during these periods include brick and wood-frame Bungalow-style and revival-style structures. The last building boom occurred in the late 1950s with the construction of 300 brick ranches.

COMMUNITY SUMMARY SHEET
Community Name: University Park

Narrative (continued):

Community facilities include a police department, started in 1965, a school, and a community park. The two-room company school built in the mid-1920s was converted to a residence after the county constructed a new school building in 1928. The county school remained in use, with subsequent additions, until replaced in 1978 with a modern facility. The town park was purchased in 1941, though its development was postponed by World War II. It was designed and developed in the early 1950s to include a sunken garden, trails, playground, tennis courts, and picnic area. The town remains without commercial properties.

**Narrative:**

Villa Heights is located on a wedge of land between the Baltimore-Washington Parkway, Annapolis Road and Landover Road in Prince George’s County. The community is located north of Cheverly, south and east of Bladensburg, and west of Landover Hills. Development in this area increased after plans for sewerage lines were authorized in 1927. In the 1930s, a fragmented grid of streets was laid out and lots sold for the construction of houses. Many of these houses were constructed in the late 1930s and early 1940s. By 1942, Villa Heights contained approximately 75 houses. Residential construction continued through the 1960s with additional residential blocks added to the west side of the original subdivision. Since the responsibility of constructing houses was left to the lot owners, the housing stock varies in style, construction material, and building siting. The most common residential form is a modest one-story single-family brick house. The residents of Villa Heights have relied on adjacent communities for facilities and services such as schools, libraries, parks, and retail outlets.

West Lanham Hills is located north of the District of Columbia in Prince George’s County. The neighborhood is bounded by the communities of New Carrollton and Landover Hills, as well as Annapolis Road (Defense Highway MD 450), the Capital Beltway (I-495), Veterans Parkway (MD 410), and the Pennsylvania Railroad line. In the early 1940s several communities were under construction along the Annapolis Road due to the access it allowed into the District of Columbia. These other communities included Landover Hills, Radiant Valley, Landover Knolls, Landover Estates, and Bellemead.

West Lanham Hills was constructed on farmland located between Annapolis Road and the Pennsylvania Railroad. The streets of the subdivision were laid out in a grid pattern near Annapolis Road, becoming more curvilinear to the south and east. By 1942, the community was well established with approximately 180 houses. A school was constructed within the subdivision by 1957, followed by a fire station constructed in the years between 1965 and 1979. The housing stock of the development consists of developer-built brick and frame buildings in the rancher and cottage forms. Increased population and the opening of the Capital Beltway in 1964, resulted in the construction of numerous apartment buildings and complexes along Annapolis Road. Approximately 2000 apartment units had been constructed by 1970.

Commercial development in the area extends along Annapolis Road and includes the Defense Shopping Center and the West Lanham Hills Shopping Center. The community also includes the West Lanham Hills Neighborhood Park. The West Lanham Hills School has since closed, therefore, the town’s students must travel to schools in adjacent communities.

**Narrative:**

Westphalia is the name of a rural residential area located east of the District of Columbia in Prince George’s County. The neighborhood is located east of the Capital Beltway (I-495) and north of Marlboro Pike. Westphalia was the name applied to a 500-acre farm estate owned by the Burgess family in the 17th century on the north side of present-day Westphalia Road.

The area remained agricultural in use until the end of World War II. Despite a housing crisis and the rapid development of surrounding communities, Westphalia remained rural in character. When two small subdivisions were constructed during the 1940s, homeowners depended on private wells and septic systems, despite unsuitable soil conditions for the use of septic systems. Both Chester Grove and Little Washington were constructed in the 1940s. Chester Grove is located on the north side of Westphalia Road and consists of a curvilinear street pattern, while Little Washington is a grid of streets located at the intersection of D’Arcy and Sansbury Roads. Together the two communities total 150 residences. The Chester Grove community has a variety of housing styles and construction dates reflecting the practice of selling unimproved lots for the owners to construct their own houses. In contrast, Little Washington is more homogeneous in style and construction date. A third subdivision, Westphalia Estates, was constructed in the early 1960s. A total of 75 brick ranch and split-level style houses were constructed in this subdivision.

KCI Technologies, Inc.  
October 1999
The Westphalia area contains one school, the Arrowhead Elementary School, on Sansbury Road near the Little Washington community. The community also contains the Westphalia Neighborhood Park, established on the north side of Westphalia Road. Another use in the neighborhood by the 1970s included the 20-acre site of the Institute for Carpenters and Joiners at the intersection of Westphalia Road and Mellwood Road. Also located along Mellwood Road is the German Orphanage Home on a 68-acre farmsite. The private organization was founded in the District of Columbia in 1879 and moved to its present location in the 1950s.

COMMUNITY SUMMARY SHEET

Community Name: Whiteley
City/County: Prince George’s
Transportation Association: Streetcar: Washington, Spa Spring and Gretta Railroad

Chronological/Development Periods:
- A.D. 1680-1815
- A.D. 1815-1870
- A.D. 1870-1930
- A.D. 1930-Present
  specific dates (if known):

Residential Property Types:
- Unplanned Suburban Neighborhoods
- Planned Suburban Neighborhoods
  developer planned / owner built
- Planned Suburban Development
  (developer planned and built)

Non-residential Property Types:
- Commercial and Industrial Properties
- Community Buildings
- Recreation/Conservation Areas
- Not Applicable

Associated International/National Trends:
- early suburbs/Picturesque Movement
- Elite suburb planning
- Industrial town planning
- post-WW I
- WPA housing
- post-WW II

Associated Local/Regional Trends:
- retreat for wealthy
- expanding industry
- returning veterans
- expanding government (post-Civil War)
- expanding government (post-WW II)
- expansion of existing communities
- association with transportation mode

Narrative:

Based upon available information, including historic maps, Whiteley was first settled by 1914. Located north of the District of Columbia in Prince George’s County, the neighborhood is bounded on the north and east by Rogers Heights, on the south by Bladensburg, and on the west by Kenilworth Avenue (MD 210) and Edmonston. On the 1914 USGS Map of Prince George’s County, Whiteley appears as a few scattered houses at the intersection of Edmonston Road and Decatur Street. The Washington, Spa Spring and Gretta Railway followed the alignment of Edmonston Road. Decatur Street extends east from Hyattsville through Edmonston and crosses the Northeast Branch of the Anacostia River before terminating approximately 700 feet east of Edmonston Road. It is around this terminus that Whiteley developed.

This area is labeled on a 1917 map as Wasena Park and consists of three dead-end roads, including Decatur Street, extending southeast from Edmonston Road. Approximately 10 structures are located along the three streets in 1917. No additional development had occurred along these streets by 1936. However, between 1936 and 1942 approximately 65 structures had been built and a fourth street had been added. The streets share the same names and alignments as roads within the adjacent community of Edmonston, though they were never joined and are now separated by Kenilworth Avenue (MD 210). The streets within Whiteley are named, from north to south, Decatur Street, Chesapeake Road, Crittenden Street and Buchanan Street.
The community name of Whiteley appears for the first time on the 1957 USGS Quadrangle map. By 1957, the subdivision of Rogers Heights had surrounded Whiteley to the north and south and Chesapeake Road was extended to connect with Rogers Heights. Between 1957 and 1965, Buchanan Street was extended into Bladensburg. The community has not expanded in size since 1965.

Narrative:

Wildercroft is located north of the District of Columbia in Prince George’s County. The community is bounded on the north by Good Luck Road, on the east by New Carrollton, on the south by Riverdale Road, and on the west by the Baltimore-Washington Parkway.

Wildercroft was subdivided in the early 20th century on land extending between Good Luck Road and Riverdale Road. Scattered residences were constructed on large lots without the service of water or sewer lines. By 1917, only six residences had been constructed along present-day Auburn Avenue. Between 1917 and 1944, residential construction had spread to the east and west of Auburn Avenue along present-day 3rd Street, Oakland Avenue, and Chestnut Avenue. The community had approximately 55 residences, a church, and a school. After the completion of the Baltimore-Washington Parkway along the west side of Wildercroft, many of the larger residential lots were re-subdivided into smaller lots for additional housing. The southern portion of the Wildercroft subdivision along Riverdale Road was developed for several garden apartment complexes in the 1960s. The Prince Georgetown Apartments were constructed in 1963, followed by the Fernwood Gardens and Chestnut Ridge in 1966. Residents rely on nearby communities for public services, education facilities, and retail establishments.

Narrative:

Woods Corner is located south of the District of Columbia in Prince George’s County. The community evolved from a crossroads settlement at the intersection of Branch Avenue (MD 5) and Auth Road to a small subdivision by the 1950s. Development was attracted to this area in the 1940s and 1950s, due to the construction of Andrews Air Force Base in Camps Springs, and the proximity of the region to the District of Columbia. The installation of water and sewer lines into the area in the late 1950s and early 1960s, promoted additional growth.

The name of Woods Corner was first applied to the crossroads settlement in 1942. Prior to this time only a few scattered buildings were located along the length of Branch Avenue and at its unmarked intersection with Auth Road. By 1942, four streets had been laid out in a grid pattern north of Auth Road and west of Branch Avenue. Approximately 12 houses existed along those streets at that time. In 1956, the community contained approximately 35 houses and had extended west to connect with the subdivision of Broadview. The land between the two communities was used as a gravel pit. The two communities were further separated by the construction of the Capital Beltway through the gravel pit in 1964. By 1965, the community of Woods Corner was located in the northwest quadrant of the Capital Beltway – Branch Avenue (MD 5) interchange and included approximately 80 houses.

Community facilities, such as schools, are located in adjacent communities and retail facilities include numerous shopping centers constructed along Branch Avenue (MD 5) during the second half of the 20th century.
